

DESIGN

NOT ONLY BEAUTIFUL,
BUT ALSO SMART.

**Everybody is talking about design.
We unify design with utmost functionality.**

Globelyst M allows user-friendly handling of the in-vehicle equipment, helps reducing search times due to new and smart features, and facilitates even more efficient working.

The new and integrated ProSafe system makes both loading the transporter as well as securing the load a snap.

THE WORLD LEADER AT HOME IN GERMANY

We are the world's market and technology leader for professional in-vehicle equipments for all crafts and service branches.

Regardless of our global market orientation, we are firmly committed to the business location Germany. By now, 500 employees produce our complete product range at our headquarters in Bavaria. From this single production location, our innovative products »Made in Germany« are sent out into the entire world. Sortimo in-vehicle equipment solutions have to fulfill the highest standards.

Therefore, we have been successfully conducting crash tests together with our partners from DEKRA, TÜV and ADAC for two decades. With the same pioneering spirit from our beginning, we are continuously investing into the improvement and further development of our product line. It is our objective to identify demands at an early stage and to find innovative solutions. By doing so, we are already creating products today which are the future standard of tomorrow.

Sortimo®

Intelligent Mobility

YOUR ADVANTAGES

1. Cost savings

Keep on driving. While others are still refueling, you are on your way to the next customer.

2. Time savings

No need for you to work extra hours. More than 50% of your colleagues are unproductively wasting more than one hour a day in their transporter. Be smarter. From now on, tools left behind, damaged goods and cluttered small parts are a thing of the past.

3. Load Safety

ProSafe – The safety belt for both your cargo and your life. Integrated load safety – as standard for the first time.

4. Flexibility

Have everything your own way, we are accommodating your requirements. At Sortimo, you are the designer for your in-vehicle equipment and you decide where your tools, machines and goods are safely stowed. All individual components can be freely combined.

5. Lightweight construction

Keep on loading. Consistent lightweight construction allows you to add more payload. Compared to conventional in-vehicle equipment solutions, Globelyst M saves up to 50% weight. Go and compare for yourself!

6. Innovative

That's just who we are, we can't do it any other way. For almost 40 years now, we have been investing in future-oriented technologies and are developing innovative solutions to make your work easier. Go and decide for yourself!

7. Quality

Durable – sturdy – tested – sustainable. We are regularly conducting crash tests and quality checks for your safe investment. All drawer bodies and trays are made from highly-durable sheet steel, and are powder-coated to guarantee permanent corrosion protection and rule out any risk of injury from sharp edges. Made in Germany.

8. Image

It is like in a personal relationship: first impressions count. Show your customer that you are a professional. Your transporter is the business card of your company.

BEFORE

AFTER

EMISSIONS REDUCED, LEAD INCREASED

Owing to an ideal mixture between steel, aluminium and composite fibre materials, the dead weight of the in-vehicle equipment is reduced to a minimum. In comparison with conventional in-vehicle equipments, we have achieved weight savings of up to 50%.

This can only be done through consistent use of exceptionally stable and lightweight construction materials. As CO₂ emissions are significantly reduced, you not only save costs, but also preserve the environment. In addition, the new Globelyst M consist of materials which are 100% recyclable. Each in-vehicle equipment component can be fully reused at the end of its application cycle.

AHEAD OF ITS TIME

Globelyst M follows the proven construction kit principle, in which all module components of our system – from the optimized aluminium Space-Frame up to the cases and BOXXes program – are fully compatible with each other. The wide-ranging, new combination possibilities facilitate even more individual design of your in-vehicle equipment.

We offer:

- ✓ Demonstration vehicle presentation on site
- ✓ customized individual 3D-planning for each transporter
- ✓ offer preparations free of charge
- ✓ short delivery times
- ✓ professional installation

Or just simply drop in! Thanks to our extensive distribution network, we are always nearby. See page 42 for further information.

QUALITY | MADE IN GERMANY

**Your craft demands clever solutions,
promising innovations and best quality.**

With our multi-material construction of your in-vehicle equipment made from high-strength sheet steel, lightweight aluminium and sturdy plastic materials, we deliver utmost quality which leaves no questions unaddressed.

Your customers can depend on you, and you can always depend on Globelyst M. Our quality goes without saying!

SORTIMO XPRESS

GLOBELYST M – AT A GLANCE

Long components tray

The long components tray makes transporting long objects a walk in the park.

Shutter and drop-down front

They provide additional order, visual cover and safety in your utility vehicle.

Sortimo S-BOXX

The sliding boxes are available in two widths and heights. They are the ideal containers for small parts, spare parts or screws and can be safely clicked onto the shelf floor. The drawer function allows easy access to the contained parts.

Sortimo accessory

Sortimo original accessory offers practical add-on products for every branch of trade. From the hose holder up to the cable hook, no wishes remain unanswered.

Shelves and trays

The interior space of your vehicle is utilized up to the last corner: tools and spare parts can be clearly stowed inside the shelves and trays of Globelyst M.

Sortimo T-BOXX

The practical plastic case with transparent lid allows quick visual access to its contents. Also the T-BOXX can be safely stowed inside the in-vehicle equipment.

Case clamp

Ensures safe fixing of tool or machine cases and can be positioned with a single hand movement.

Drawers

The new drawers with user-friendly recessed grip made of impact-resistant plastic can be loaded with weights up to 100 kilogram owing to their sturdy full-extension slide mechanism. Available in four different widths and heights.

Floor panels

As a basis for your in-vehicle equipment, you can choose from several protective and mounting floors. The floors are individually designed for each vehicle model, offer integrated lashing possibilities, and protect the vehicle floor from damage.

Sortimo L-BOXX and LS-BOXX

Mobile plastic boxes with a great variety of partitioning possibilities, available in five heights. The L-BOXXes can be quickly clicked together and transported as a single unit.

Sortimo M-BOXX

Large mobile box with handle. Optionally, also available with lid. The M-BOXX clicks into the system, and can also be used as a drawer.

Metal case

The classic product is available in many versions, and can be fully opened inside the in-vehicle equipment thanks to the case slide.

Workbenches

Turning utility vehicles into mobile workshops. The workbenches are available as fold or pull-out versions, and can be complemented with a swivel base and a vice.

Restraint poles

The restraint pole made of square aluminium profile with integrated pneumatic spring can be variably inserted both horizontally and vertically. The protective edges made of plastic ensure transport of windows, doors or furniture without any damage.

LASHING MADE EASY **PROSAFE**

Integrated lashing

The new ProSafe lashing system is integrated as standard into the poles of the in-vehicle equipment. This intelligent load safety feature is also included in the frame and floor rails. Additional mounting of lashing rails is no longer required.

Lashing for extra safety

The ProSafe floor lashing rails allow you to safely lash your bulky cargo. Your cargo and you are always safe on the road.

Lashing without additional weight

Thanks to ProSafe, you do not have to buy additional lashing rails. This not only saves you money, but also weight.

ONLY ACCEPT TOP-DRAWER QUALITY...

... as there is no better storage place for your tools than a drawer. Four individual models in various heights and widths with a load capacity of up to 100 kg create order and allow safe storage for all kinds of tools and small parts. Particularly clever: The recessed grips were designed for effortless opening even with work gloves.

The drawers are extremely lightweight, and due to their blinds made from impact-resistant plastic, they live up to the tough strain of everyday work. The new locking technology ensures safe and low-noise locking even during travel.

Of course, all drawers can be individually partitioned with dividers – noise-absorbing non-skid mats provide additional comfort – quality right down to the last detail.

The new Multislide with all the quality features of a drawer allows you to quickly handle your cases and boxes. From the metal case up to the new i-BOXX, all mobile transport systems from Sortimo have their safe storage location. With the full-extension slide, the case and box lids can be fully opened, and you can quickly access your small parts and tools.

Effortless opening through new handle technology – even with work gloves.

Multislide

YOUR LIGHTWEIGHT LONG COMPONENTS TRAY

With the new long components tray made from lightweight, but extremely sturdy composite fibre material, you can transport your pipes and flat materials or your cable channels and tip-tubes. Compared to a tray made from sheet steel, you save up to 30% weight. The composite material is not only extremely lightweight, but also acid-proof, and with its hard surface, it is fully protected against any external influence.

Thanks to its individual production process, the greatest possible usable length is available to you, depending on the maximum cargo space length of your transporter.

Through the new closing cover which opens towards the floor, loading and removal of pipes is unhampered by any barriers.

Opening the cover

► GLOBALYST M | FEATURES

Secure clamping guaranteed

Machine cases and containers of various sizes are safely secured inside the cargo space. Depending on the number of machine cases, the adjustable clamping mechanism with its ergonomically designed pistol grip can be easily adapted. The pressure roll made from wear-resistant foam rubber prevents slip-out of your cases. The case clamp can be mounted in any desired height and width.

Small drop-down front, great storage space

To store large spare parts more easily inside the shelf, we have developed a lightweight drop-down front made from aluminium. The flap can be opened and closed with only one hand. Thanks to the spring-loaded pivot points, the flap front remains safely shut even on bumpy roads, and does not create any noise.

Large drop-down front, even greater storage space

According to the same principle, we also offer a floor front with a height of 136 mm, which safely keeps your cargo on the shelf floor.

Largest drop-down front, even more functionality

For even greater storage space needs, we have our largest front flap with a height of 170 mm. Thanks to its locking mechanism of the opened flap at 90°, heavy spare parts can be handled more easily, as they can be placed on the back of the front flap prior to storage.

Visual cover

With our shutters made from lightweight hollow-chamber profiles, load protection and visual cover only takes a single hand movement. Additional protection against unauthorized access is provided by an optional lock.

More than a hook

With the professional and elegant aluminium system wall, you can utilize your in-vehicle equipment even better. The extensive range of accessories from the hose holder to the fire extinguisher can be easily mounted on the new hole pattern. With various hooks and clamps, the new, versatile hook system made from impact-resistant ABS plastic ensures direct access to tools and cables once the doors are open.

PORTABLE ORDER RIGHT FROM THE START

For about 40 years, it has left no wishes unanswered with regard to functionality, partitioning possibilities and longevity – the metal case from Sortimo.

Available in four different heights with a wide range of interior solutions. From inset boxes in single and double length over to dividers up to special inserts for burner nozzles.

But they all have one thing in common: the foam insert in the lid prevents mix-up of the contents, and everything remains safely in place.

For storage in your in-vehicle equipment, we have the case rails or the full-extension case tray on offer.

TIDY – MOBILE THE M-BOXX

The M-BOXX is the ideal transport container for unwieldy goods. From the paint brush to the hammer up to the pipe wrench, everything can be stowed inside. The **M** stands for mobility: Who else can say that he owns a portable drawer? From the drawer function inside the in-vehicle equipment up to its mobile use with lid – the M-BOXX is a true all-rounder. Depending on the usage requirements, additional divider sets and foam inserts are available.

TIDY – CLEARLY ARRANGED THE S-BOXX

S stands for both sliding function and sight window. With the sliding function, you can simply remove your screws and fittings just like from a drawer. The sight windows gives you quick visual access to all contents. By clicking them into the shelf floor, the boxes are safely secured during travel.

For even more refined partitioning, all boxes can be complemented with additional dividers. The boxes are also available in double width for even more storage space. To utilize space in your in-vehicle equipment even more efficiently, the S-BOXX now is also available as a semi-high variant.

For even clearer visual arrangement, the optional printable labels complement the S-BOXXes assortment. Inserted behind the clear sight window, the labels are protected from dirt and remain readable for a long time. Simple, systematic order.

M-BOXX without handle and lid

M-BOXX with handle

M-BOXX with handle and lid

S-BOXX Standard

Double S-BOXX

Semi-high S-BOXX

CLEARLY ARRANGED THE T-BOXX

Lightweight, sturdy and can be positioned as required – these properties make the T-BOXX a true alternative for the classic metal case. Owing to its base body made from polypropylene, you can also place your T-BOXX on delicate surfaces like parquet flooring or marble. Besides its transparent lid made from highly-strong polycarbonate for quick visual access from the outside, the T-BOXX in particular makes its mark with its practical inset boxes.

The inset boxes can be positioned as required and can be combined effortlessly with other small parts and tools. Through the catch mechanism on the floor and in the lid, all small parts remain in place during transport. Also no problem at all: securing. No matter if shelf tray, case rail or wing door – the T-BOXX can always be safely secured.

T-BOXX hooked into the in-vehicle equipment

MOBILITY FOR

YOUR FAITHFUL COMPANION THE L-BOXX

No matter if heavy material, customer samples or tools, the L-BOXX from Sortimo is your universal transport container – from the vehicle to the job site and back again.

Safe, convenient and reliable. Of course, the L-BOXX integrates seamlessly into the Globelyst M system. Additional advantage: the quick-click system.

It allows effortless connection of the L-BOXXes with one another, and re-separation is done with only a single push of the button – as is required. With the practical CarMo base plate, all L-BOXXes can even be transported safely inside your passenger car.

PROFESSIONALS

ONE SYSTEM FOR ALL

The Sortimo L-BOXXes: a truly convincing system. Prestigious manufacturers on the market are already using the L-BOXXes as transport containers or as outer packaging. This way, the L-BOXXes become true partner-apps with a multitude of equipment possibilities. No matter whether used for tools or small parts – **Sortimo sets industry standards with regard to professionalism and mobility.**

For you as the customer, only the colours are changing, because no matter from which manufacturer you buy a Sortimo-Boxx with the respective company branding – the functionality remains unchanged – the system remains the same, even across all trade branches, and as a matter-of-course it **is compatible with the Globelyst system.**

SORTIMO PARTNER-APPS FOR YOUR SUCCESS

TRUE VALUE RETENTION FLOOR AND WALL

Not only tools require safe transport, also the transport vehicle itself needs to be protected. Is there anybody who has never seen it happen: Cargo falling against the side wall due to carelessness, leaving ugly dents in the vehicle body. Of course, this causes great nuisance, but it can be prevented with sturdy side cladding, thus ensuring your transporter's value retention. No more trouble if you have to return a leased vehicle.

The wall cladding **Sowaflex** made from lightweight honeycomb material protects the vehicle from „internal injuries“ with its extremely impact and scratch-resistant surface. Fitting precisely, and about 60 % lighter than wood, the moisture and chemical-resistant plastic cladding can be even mounted to sliding doors and tailgates. Each part is available as a single part. This way, the wall cladding can be individually composed for each transporter.

With the wall cladding **SowaPro** made from grey, coated HDF material, we have a cost-effective all-in-one solution on offer for the entire cargo space.

The floor forms the basis of any in-vehicle equipment, and it serves both as a protective element for the vehicle, and is also the foundation for stable screw connection. Fitting precisely into each vehicle, the two floor variants **Soboflex** and **Sobogrip**. It is the mounting foundation of the in-vehicle equipment without perforating the vehicle floor.

Regardless whether you opt for the extremely wear-resistant, anti-skid 12 mm Soboflex floor, or the cost-effective 9 mm Sobogrip protective floor – you will always receive guaranteed Sortimo quality. Our floors are exclusively made from Nordic birchwood, and the single wood layers are permanently bonded and water-resistant. The vehicle is ideally protected against damage, and the aluminium door sill protector ensure a firm and safe footstep – floors with added value.

SAFELY SECURED LASHING SYSTEMS

Be it tools or material – safe transports starts with lashing. So that vehicle drivers can optimally fulfill their duties, we offer various possibilities to integrate **lashing rails** for load securing inside the transporter.

The lashing rails which can be mounted to both the wall cladding and into the mounting floors form the basis for **restraint poles** on the one hand, and **lashing straps** on the other. The floor lashing rails additionally make their mark through barrier-free mounting into the Soboflex or Sobogrip floors.

The universally deployable restraint poles can be inserted both horizontally and vertically to lock the cargo loads in place, depending on the location of the lashing rails. With their square cross section, they offer optimal grip. On top of this, lashing straps and lashing fittings can be inserted into the integrated rail profiles.

Additionally, the Sortimo accessory programme offers a wide range of load securing possibilities, starting with the strap up to the load safety net.

TRANSPORT OF GASES WITHOUT ANY RISK UP AND DOWN VENTILATION

The legislation demands vehicle ventilation with unobstructed openings for the transport of gases. Sortimo offers a ventilation system which can be optionally used in an up or down ventilation mode, depending on the transport of heavy or light gases.

With its aerodynamic design, the fresh air throughput lies significantly above legal requirements.

FLEXIBLE LOAD SECURING ON THE VEHICLE ROOF | TOPSYSTEM

Ladder lift

The ladder lift is suitable for the comfortable transport of heavy ladders. No more climbing up and lashing of the ladder thanks to the pneumatic spring-loaded lift system. This way, all single and multi-part ladders can be conveniently handled from the ground. The ladder lift is available in the basic lengths 2.5 and 3 metres.

The transport tube

The perfect addition to the TopSystem. This way, even long cargo can be stowed away safely and dryly. The lid can be closed.

Load roller

The ideal helper for heavy or large-volume transport cargo. With the load roller, the material can be conveniently loaded onto and unloaded from the roof. It is available in a width of 500, 1250, 1350, 1450, 1550, 1650 and 1750 mm.

Profile supports for a variety of positions

The profile supports serve as lateral cargo securing means. The high profile support can be individually shortened. Both profile supports can be locked in any position via the aluminium transverse profiles.

Rotating light

Warning light to secure the working area.

Profile support

Additional crossbeams can be effortlessly integrated. They increase stability and serve as mounting point for the extensive range of accessories. Also the lashing anchors can be easily hooked into the profiles. A rubber strip on top prevents shifting of cargo.

The side rail

The aluminium side frame serves as stabilizer and accommodates as many crossbeams as required. The crossbeams can be imprinted with your company logo. Leaning a ladder to the vehicle is possible without any damage.

Fastenings for straight ladders

Fixing brackets can be mounted on the side frame to prevent the ladder from shifting sideways, and to ensure firm footing of the ladder.
