Sovella – human workspace

For all major industrial sectors

Sovella is one of the leading manufacturers of industrial workstations and furniture. We provide tailored physical infrastructure for major industry sectors all over the world.

- **Assembly industry**
Electronics, telecommunications, and fine mechanics
- **Basic industry**
Metal, engineering, and vehicle industry
- **Other industry sectors**
R&D centers and industrial laboratories
Aviation and military industry
- **Homes and public buildings**

All our products are manufactured in our modern facility in Jyväskylä, Finland.

Sovella® introduces the human factor to the workspace.

Industry evolves

Globalization brings customers and competitors nearer, and increases competition. Companies migrate to new cities and even abroad to decrease production costs and to get closer to their market. They also desire to improve productivity through people – utilizing various indicators and studies. Additionally, production processes change at an ever increasing pace, which forces factories to change their layout far more frequently than before.

Sovella helps you evolve with your industry

We are an industrial innovator in workspace development and the customer is always our first priority. We have unique expertise in manufacturing ergonomic workspace solutions for constantly changing industrial environments. Our human workspaces increase your productivity by improving the wellbeing of your personnel. Our versatile furniture is easy to modify and update because our whole product range is modular and interchangeable.

Human-centered design

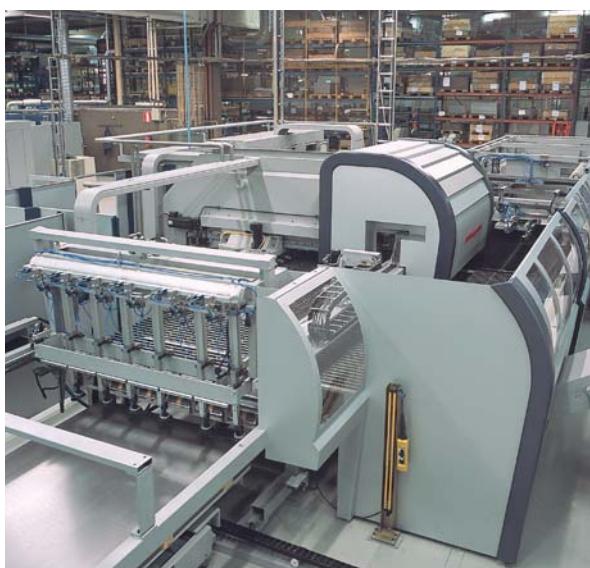

Sovella® workstations bring the human factor into your workspace. In their design, we have paid special attention to human physiology and individual needs. Proper ergonomics increase comfort and reduce the number of sick days, which leads to higher productivity and substantial cost savings. Our compact solutions also save floor space.

Our workstations are easy to adjust, and each detail embodies practical thinking. Thus all the equipment required for work processes is always comfortably within reach. This optimizes the operator's movements, making work less strenuous and eliminating stress injuries.

We proactively define the future of individual workspaces, integrating our customers' needs as the cornerstones of our design process.

Sovella – human workspace

Tailored to suit your needs

We carefully study your workplace and production methods to ensure that you get the best possible workspace solution for your working environment and your workers' unique needs. The modular design enables you to integrate our workspaces fully with your current layout. You can also easily modify them using our wide range of interchangeable accessories.

Quality improves usability

Sovella® furniture represents high quality and real usability. Sturdy, practical structure, detailed finishing, and stylish looks are the ingredients that make up our top-class product. Ideal materials and careful testing ensure that our solutions work smoothly and are longlasting, even with constant maximum load.

Extensive product range

Each working environment has its own special requirements. We offer a wide range of standard products and solutions for numerous industry sectors. Our large variety of interchangeable accessories ensures that you get everything you need from one place.

Sovella® product family

- Workspace and factory layout planning
- Concept development
- Workstations
- Storage solutions
- Trolleys
- Assembly lines and flow-through shelving

Sovella – human workspace

Decorating with colour

The working environment can also look good and be inspirational. By choosing the colours of your equipment to match your corporate colours, you can reinforce your corporate image whilst creating a pleasant working environment.

Doors, drawers and **perforated panels** all come in various colours. The combination of different colours creates an interesting effect. Colours can also act as codes or identifiers.

Sovella – human workspace

Printed colours do not give a fully accurate representation of painted colours. Please ask our agent about various samples.

Colour codes

		Colour reference	Doors	Drawers	Perforated panels and back panels	System shelves
Blue	02	NCS 4040	A	A	A	-
Ruby red	03	RAL 3003	A	A	A	-
Green	04	RAL 6011	A	A	A	-
GWS blue	07	RAL 5007	STD	A/STD	STD	-
Light blue	08	RAL 5012	A	A	A	-
Black	18	RAL 9005	A	A	A	A
White	21	RAL 9010	A	A	A	STD
Sovella red	25	RAL 3002	A	A	A	A
Antique copper	31	-	-	-	-	A
Light grey	35* & 41	RAL 7038	A	A/STD	A/STD	A
Effect silver grey	38	AE 4148	A	A	A	STD

The colour code is included in the order number. It is either at the end, following the hyphen (e.g. 860 804-**35**), or in the middle (e.g. 100/40/200 C 334 **07** 000).

* 35 is ESD protected light grey; 41 is non-ESD protected. Please remember that ESD protection will result in a slightly darker shade of colour than the given RAL code.

STD = Standard factory colour, normal warehouse delivery, listed price

A = Factory colour, delivery 15 days from the factory, listed price

Table, cabinet, shelving and drawer frames are light grey (RAL 7038 ESD), excluding the blue drawer unit 71 (RAL 5007). Outside of the colour range, additional colours are available on request. Please contact our agents or email us at: sales@sovella.com.

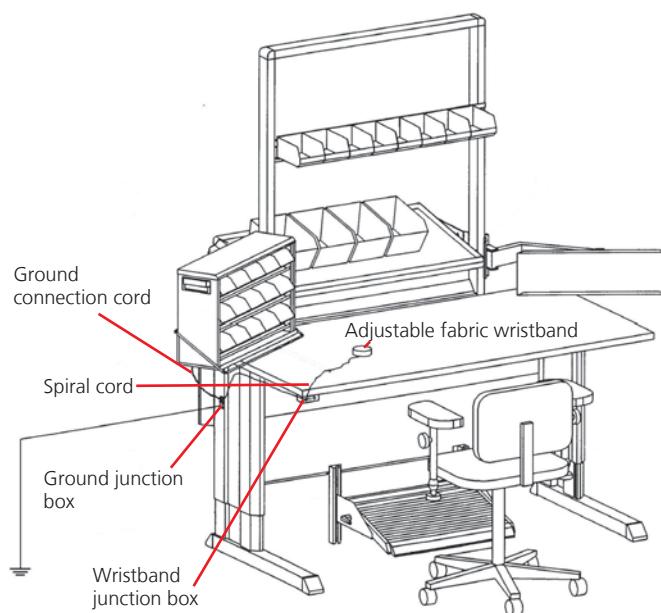

ESD protection guarantees a safe working environment

Particularly in the electronics industry, work is often carried out in an EPA area that is protected from static discharge. Protection in this case means effective grounding, which involves both grounding equipment and painting the frame of the ESD workstation with semi-conductive paint.

We have extensive experience in developing, manufacturing and supplying ESD furnishings. All

our workstations and related products are supplied with an electrically semi-conducting coat of paint and we supply furnishings, seats and grounding components for ESD-protected workstations. We also build complete production systems equipped with ESD-protection. Our products meet the requirements specified in the IEC-61340-5-1 standard.

Static electricity

The abbreviation ESD stands for Electrostatic Discharge, a process that occurs between two objects of differing electric potential. Normally, electric charges are discharged slowly from objects' surfaces. If, however, the difference in electric potential becomes too great the electrical current accelerates resulting in a sudden current surge.

An ESD protected area is called an EPA area. In an EPA area, ESD protection must be observed in all materials, employees' clothing and air humidity. Workstations and employees in an EPA area must also be grounded with protective resistance (1 Mohm) to an ESD ground.

Our standards comply with the highest certification requirements

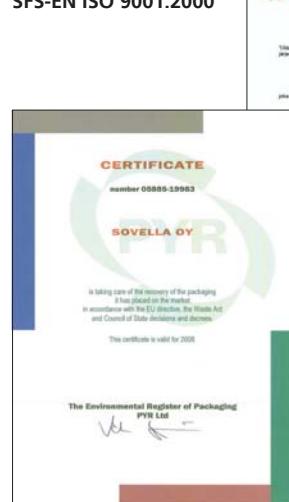

All our steel products have a 5-year warranty. To obtain a copy of our certificates, please contact info@sovella.com.

IPA Qualification Certificate

The Concept workstation is suitable for use in class 10.000 clean rooms in accordance with US Federal Standard 209E.

Quality certification SFS-EN ISO 9001:2000

Packaging treatment following to EU directives.

ESD-approved products

ESD-approval certification

Our products fulfill the basic requirements of IEC 61340-5-1.

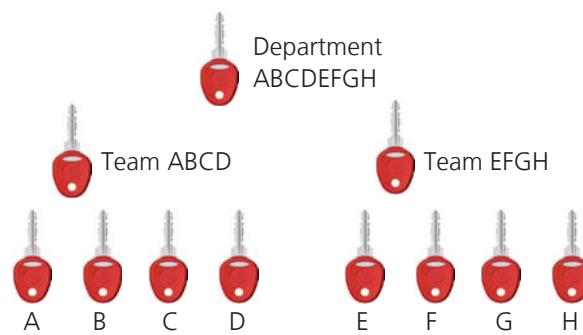

Laboratory environment certification by SEFA

TÜV certification for Concept workstation

Three-level locking system

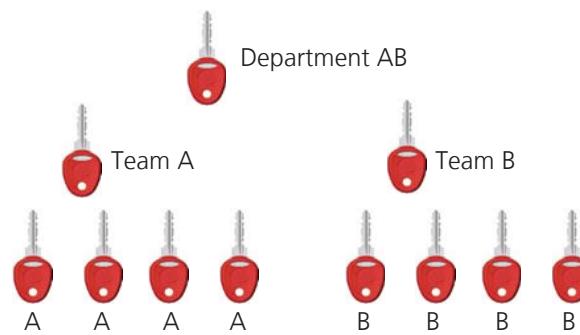

Sovella products can be equipped with a three-level locking system. This allows both serializations of individual and identical locks.

Serialization of individual locks

Each drawer or cabinet has an individual lock in a production unit, but a master key opens all the locks of the unit. The master keys can also be serialized and the third-level key opens all the drawers and cabinets of all the production units.

Contact your Sovella representative for additional information. The locking services are always specified for the order.

Serialization of identical locks

Each team member needs only one key to access all the drawers and cabinets in a production unit. A master key opens all the drawers and cabinets of all the production units and can also be serialized.

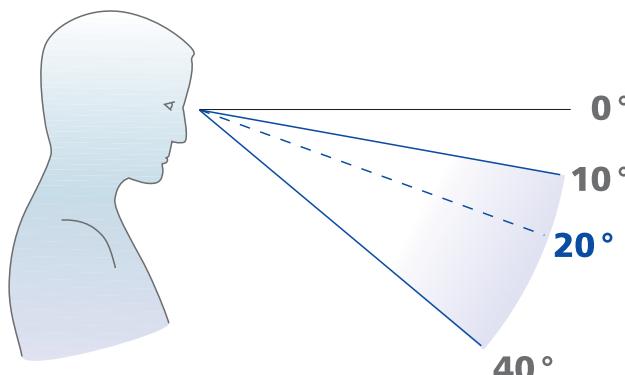

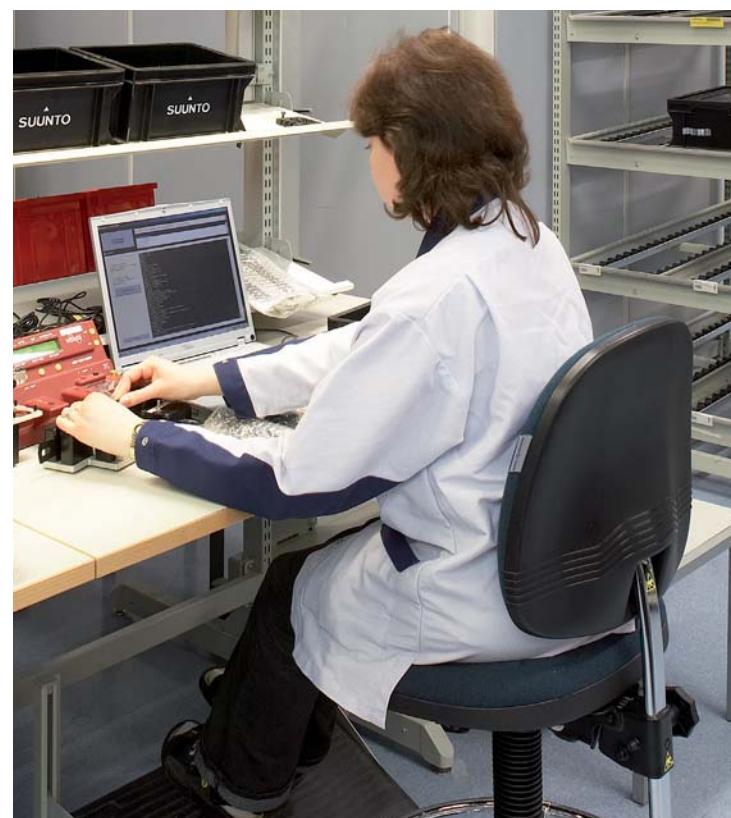

Ergonomics in Sovella workstations

Costs associated with health and safety problems are an ever increasing concern to all industries. This concern drives industries to seek solutions to provide a healthy, safe and productive working environment. Designing a workplace with ergonomics in mind improves the workers wellbeing which in turn improves productivity. When the correct ergonomics are employed in the workplace companies reduce costs from injury and increase bottom line profits from increased productivity.

The Modular design of Sovella workstations

enables proper ergonomics. With a wide range of accessories and adjustments Sovella can provide customers with a customized solution using standard components. Modularity and accessories are individually adjustable according the task and human requirements.

Sovella's workstations and accessories can be adjusted for operators of different heights working with left or right hand. Correctly adjusted workstations decrease stress in the muscles and enables productive work through the shift.

Location of the correct view angle

Focus point should follow these guidelines:

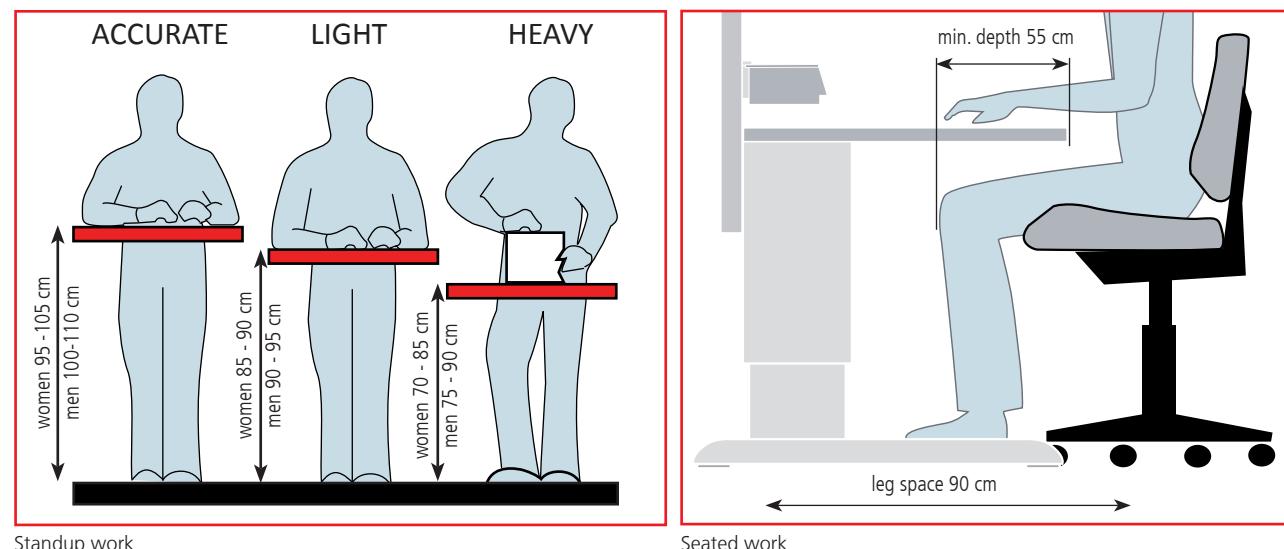

- Continual movement of view should be in 30 degree sector
- Continuous view angle should keep the head in a comfortable position (line of view should be 10 to 40 degrees below the horizontal line)
- Displays should be positioned 20 degrees below the horizontal line

Seated or standup work?

Decision of seated or standing work is dependent upon the work to be executed. The height of the work surface is determined by such factors as size and weight of the part, precision need, assembly process, repetitiveness etc. Differences in operator height require height adjustment for the work surface and accessories. Furthermore

correct leg space, optimal reaching distances and directions provide optimal work movements and position for the operator. When designing the work space for a seated operation leg space requirements must be considered. The recommended space should be at least 80 cm wide and 90 cm deep at floor level. For stand up work, the required space is much smaller.

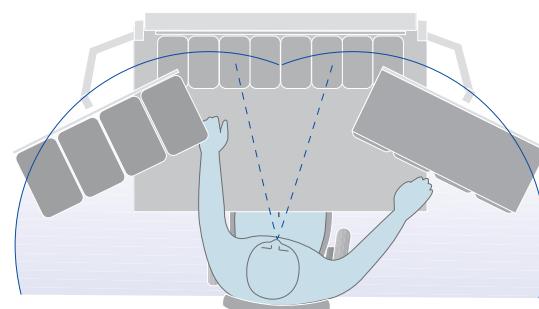

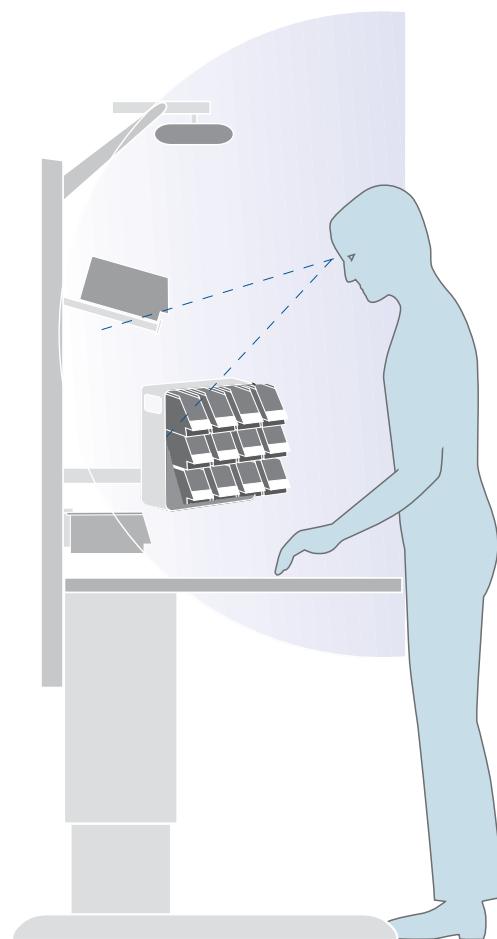

Standup work

Reaching distances and heights

To improve working postures in assembly work, the most-often used parts should be placed into the optimal horizontal working area within workers sight. Avoid overly large or deep workbenches, which can cause improper reach and reduced productivity. Assembly work is most ergonomic when parts are within easy view and reach.

The vertical work area and reach zone can be fine-tuned with accessories. Sovella's height adjustable arms optimize work movements and keep parts or tools within easy access. Operators can work with wrists and arms in optimal posture with shoulders relaxed. Tilted bin rails and shelves keep the wrist in a neutral position when picking parts. The tilt angle also provides easy identification of the parts with the proper viewing angle.

Worktables

Concept worktables

'Concept' worktables are designed for the needs of the electronics industry, where ergonomic qualities are the most important requirement. There are many possible adjustments, all components fit together seamlessly, and each detail is practical in use. The workstation adapts to the work process and the needs of the user. As a result all movements of the user can be optimised, which in turn increases performance and productivity and decreases work-related stress.

Modular design provides total integration with the existing system and the potential to flexibly adapt to changes in the environment. Concept worktables are typically used in work such as assembly, quality control, and repair.

Concept worktables are also available in motorised and hand crank versions.

Sample Concept workstations

This page shows assembled workstations that can easily be adapted to meet individual needs using the accessories on pages 30-43.

Worktables

Three easy steps to design your Concept workstation:

1. Select the table frame and the height adjustment method: standard, hand crank or motor table.
2. Select a table top to suit the frame: laminate or ESD table top.
3. Equip with accessories from page 30 onwards.

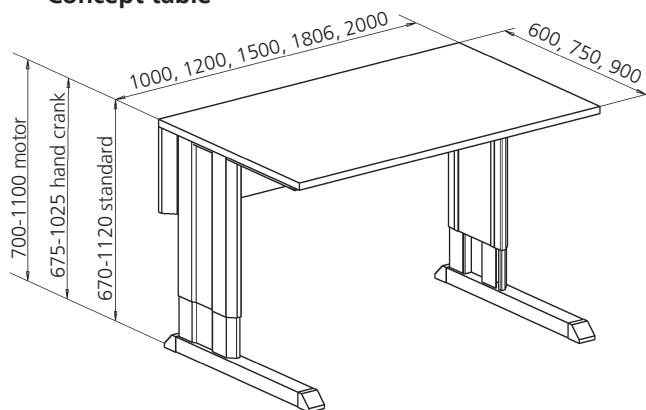

1. Concept worktable frame

worktable frame size W x D mm	standard table frame order No	table frame max load kg	table frame with handcrank height adjustment order No	table frame max load kg	table frame with motor height adjustment order No	table frame max load kg

2. Concept corner table frame (right)

name	size W x D mm	order No
Corner table frame for a standard table 600 mm deep	1000 x 600	111 35 001
Corner table frame for a standard table 750 mm deep	1200 x 600	111 35 002

Concept table

3. Concept extension table frame (right)

name	size W x D mm	order No
Extension table frame	1500 x 600	112 35 001
Extension table frame	1500 x 750	112 35 002
Extension table frame	1806 x 750	112 35 003

The W x D x H rule

All our dimensions follow a WDH rule, where the first dimension is the width (W), the middle the depth (D), and the last the height (H).

Easy height adjustment

The Concept worktable can be equipped with manual or electrical height adjustment.

Table tops

Two standard choices for tops.

Table tops

size W x D mm	order No laminate table top	order No ESD table top
1000 x 600	860 026-66	860 476-63
1000 x 750	860 590-66	860 590-63
1000 x 900	860 593-66	860 593-63
1200 x 600	860 027-66	860 477-63
1200 x 750	860 554-66	860 555-63
1200 x 900	860 594-66	860 594-63
1500 x 600	860 028-66	860 478-63
1500 x 750	860 029-66	860 479-63
1500 x 900	860 031-66	860 481-63
1806 x 600	860 580-66	860 581-63
1806 x 750	860 030-66	860 480-63
1806 x 900	860 032-66	860 482-63
2000 x 600	860 591-66	860 591-63
2000 x 750	860 592-66	860 592-63
2000 x 900	860 033-66	860 483-63

750 mm deep frames are used with 900 mm deep table tops.

Laminate table top -66

Light-grey, speckled laminate surface
Plastic edges
Thickness of 23.5 mm
Threaded bushings for fixing to frames

ESD table top -63

Grey laminate surface
Beech edges
Thickness of 25 mm
Threaded bushings for fixing to frames
Semi-conductive (ESD)

The extension part 860 634-35 can be used with 900 mm deep table tops to ensure stability when handling objects heavier than 50 kg the table. It is fixed between table legs and rear case. 2 pieces needed/table.

Colour stripes

You can add colour to the sides of Concept and TowerLine table legs with plastic stickers. There are four standard colours: blue, green, red and yellow. Colour stripes are not included in the table frame packs.

Concept table colour stripe pair

name	size mm	order No	colour
Colour stripe pair	530 x 80	860 850-00	green
Colour stripe pair	530 x 80	860 851-00	red
Colour stripe pair	530 x 80	860 852-00	yellow
Colour stripe pair	530 x 80	860 853-00	blue

Tilting frame

A Concept worktable can be equipped with a tilting mechanism that enables installation at an angle of 0–50°. When tilted, the table's load capacity is 40 kg. The tilting frame includes a table top front stop to prevent items sliding off. The tilting frame has to be installed with the bar to install the motorized mechanism.

Tilting frame 1500

name	order No
Motorized tilting frame for the Concept table	922 35 005
Bar Concept table 1500	860 088-35
The tilting frame is not available for Concept motor table.	

The tilting frame is installed on the Concept worktable frame and sold separately.

Help with moving

With a transport skate, one person can easily move tables. For long-distance moving, you will need two transport skates.

Transport skate

Compatible with tables with a max depth of 750 mm.		
name	max load kg	order No
Transport skate	180	854 061-41
Transport skate ESD	180	854 061-35

Worktables

Basic worktables

'Basic' worktables are standard tables that are suitable for a broad range of tasks and environments when fitted with accessories: testing, packing, repairing, inspecting. The Basic table is guaranteed for regular use with weights up to 300 kg. This degree of robustness is achieved by using a solid table structure.

The Basic upright table is ideal for lighter use, when some additional workspace is needed. The table top has smaller dimensions but the tube frame allows for the use of different accessories.

Stepless height adjustment

The height of worktables in our Basic range can be steplessly adjusted from 650 to 900 mm, which makes these tables suitable for work while sitting or standing. Packing is a typical example of work where the worktable height must be set correctly for the height of the worker.

Basic workstation examples

This page illustrate assembled workstations that are easy to adapt for individual needs through the use of accessories on pages 30-43.

Modular size

The modular (M) size refers to the distance between two upright tubes from the middle of the tube.

The modular size is used to find the appropriate accessories.

Worktables

Workshop worktables

'Workshop' worktables are designed for the most demanding use and environments. Mechanical workshops, garages, and heavy industry are environments where chemicals, heavy loads, and strenuous use necessitate robustness. These worktables are very durable and withstand the

toughest conditions. There is a wide range of accessories available.

The Workshop table is guaranteed for regular use with loads up to 750 kg.

A drawer unit can serve as a leg

Workshop worktables can be easily extended by using a drawer frame or a leg as a common support for two worktables.

This example includes

Worktables

Four easy steps to create your Workshop workstation:

1. Select the appropriate table top: steel or plastic.
2. Select a support for both ends of the table top: adjustable or fixed leg or a drawer unit.
3. Use a spacer bar to stabilise the table. A fixing frame can be used instead of a spacer bar if upright tubes are used.
4. Equip with accessories from pages 30-43.

Workshop legs

name	height mm*	order No
Adjustable leg	700-950	836 664-35
Fixed leg	800	836 303-35

* Height excluding top.

Spacer bar

width mm	order No
1000-1500	852 694-35
1500-2250	836 451-35

Fixing frame

Fixing frame is needed if the table is equipped with upright tubes. Replaces the spacer bar. Module spacing between mounting locations.

width mm	order No
1000	852 693-35
1500	860 375-35
2000	860 725-35
2250	860 376-35

The W x D x H rule

All our dimensions follow a WDH rule, where the first dimension is the width (W), the middle the depth (D), and the last the height (H).

The Workshop table can be fitted with a lower shelf for bulky items.

Lower shelves for the Workshop table

name	size W x D mm	max load kg	order No
Lower shelf for adjustable leg for table 1500	1370 x 648	200	924 35 012
Lower shelf for fixed leg for table 1500	1370 x 648	200	924 35 014
Lower shelf for adjustable leg for table 2000	1870 x 648	100	924 35 013
Lower shelf for fixed leg for table 2000	1870 x 648	100	924 35 015
Lower shelf for adjustable leg for table 2250	2120 x 648	100	924 35 016
Lower shelf for fixed leg for table 2250	2120 x 648	100	924 35 018

The lower shelves include a backstop.

Structure of the table top

For us, the table top is an important part of a table's structure. For example, the Workshop table top is designed for very heavy loads. Because of the table top's structure, the table is very sturdy, even with the highest loads. The feet and the drawers are attached to the threaded bushings in the table tops.

Worktables

TowerLine worktables

'TowerLine' worktables are a solution suitable for a modern, state-of-the-art laboratory. They are designed to accommodate the necessary measurement equipment and other tools ergonomically at a safe distance for use. The TowerLine worktables are robust, elegant, and very flexible; they adapt to individual needs, new equipment, and changes in environment or work.

The flexibility and ergonomics of industrial workstations are now also available for development and research laboratories. TowerLine tables provide more space for R&D and measuring work. Space can be used more effectively with double-sided workstations. This also means that the same equipment can be used for an entire team.

TowerLine workstation examples

This page illustrate assembled workstations that are easy to adapt for individual needs through the use of accessories on pages 30-43.

TowerLine single-sided workstation

Order No C 125 41 105

The lights and the colour strips are not included in the combination.

Worktables

Three easy steps to design your own TowerLine workstation:

1. Select a single-sided or double-sided frame solution.
2. Select a table top to suit the frame: laminate or ESD.
3. Equip with accessories from pages 30-43.

TowerLine worktable frame

name	size	1-sided depth	1-sided order No	2-sided depth	2-sided order No
Worktable frame	M1200	835	125 35 003	1500	125 35 007
Worktable frame	M1500	835	125 35 004	1500	125 35 008
Worktable frame	M1800	835	125 35 005	1500	125 35 009

Table height is steplessly adjustable from 700 to 1120 mm.

Frame load capacity is 300 kg/section of even load, of which 200 kg on table top.

TowerLine extension frame

Corner shelf		1318 x 400	80	854 479-35

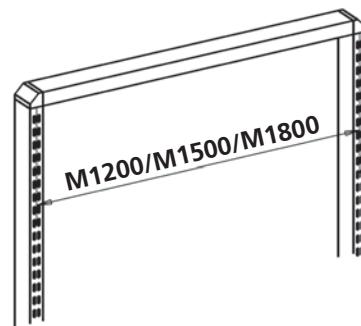

Cable trough in TowerLine worktable

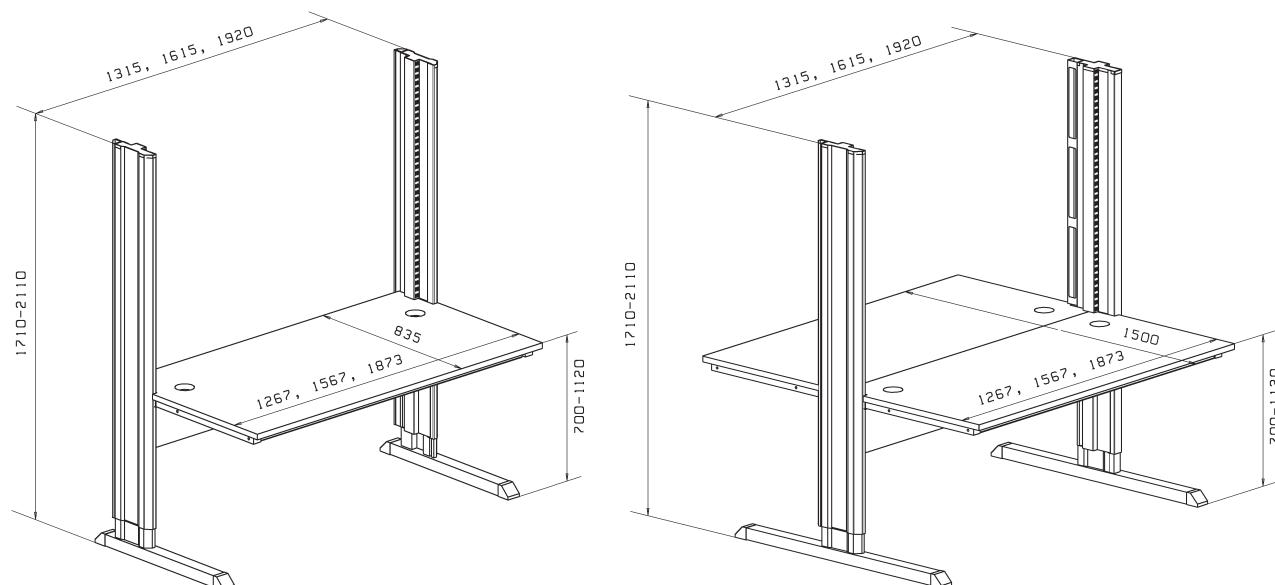

The leg of the TowerLine table includes a cable trough which makes it easy to organise cables.

Modular size

The modular (M) size refers to the distance between two upright tubes from the middle of the tube. The modular size is used to find the appropriate accessories.

TowerLine table tops

Laminate table top -66

Light-grey, speckled laminate surface
Plastic edges
Thickness of 23.5 mm
Threaded bushings for fixing to frames

ESD table top -63

Grey laminate surface
Beech edges
Thickness of 25 mm
Threaded bushings for fixing to frames
Semi-conductive (ESD)

TowerLine arm holders

name	order No
Arm holder 40	861 098-35
Arm holder 60	861 099-35

TowerLine accessories

The TowerLine worktable foot has the same perforation as the upright tubes. Therefore the TowerLine table can be equipped with the same accessories as other Sovella tables. Use the arm holders 40 and 60 to fix the arms.

Colour stripes

You can add colour to the sides of TowerLine table legs with plastic colour stripes. There are four standard colours: blue, green, red and yellow. The colour stripes has to be ordered separately.

TowerLine table colour stripe pair

name	size mm	order No	colour
Colour stripe pair	1615 x 80	860 854-00	blue
Colour stripe pair	1615 x 80	860 855-00	green

Colour stripe pair	1615 x 80	860 857-00	yellow

Worktables

FlexFlow flow-through shelving

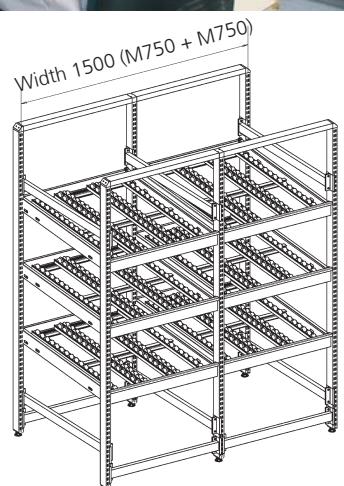

FlexFlow flow-through shelving can be used as a standalone solution or integrated into a single workstation or assembly line, resulting in faster throughput, less WIP, higher productivity and managed inventories. Your assembly process as a whole will become simpler and more efficient.

FlexFlow is a flexible solution that allows easy addition and removal of components as the role of the workstation changes. FlexFlow can easily be customised to your application and operator using a wide range of accessories. When FlexFlow is equipped for, and adjusted to individual needs the whole production process benefits.

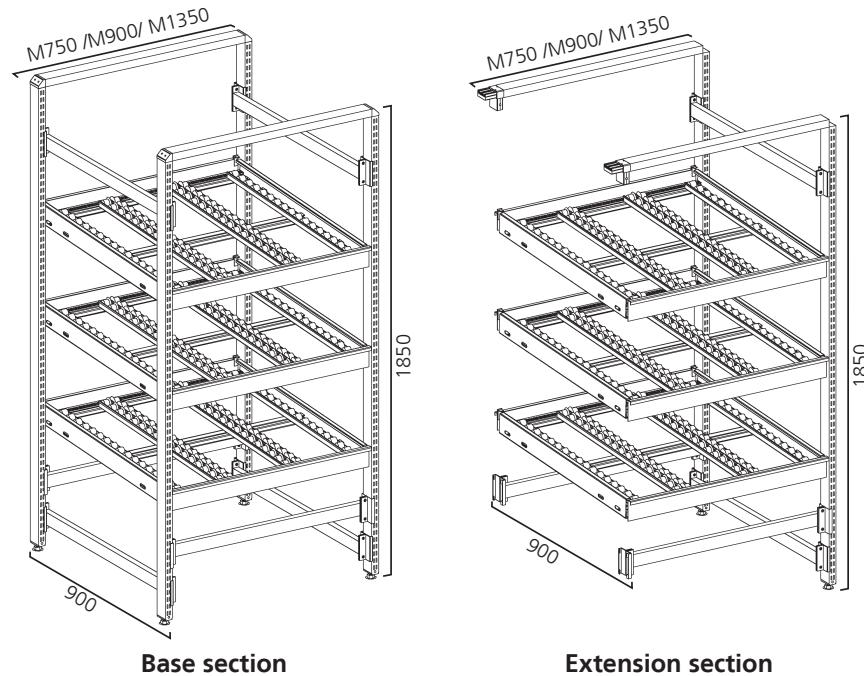

FlexFlow module sizes

FlexFlow is based on module sizes in order to allow it to be easily integrated with other Sovella workspace solutions and the MultiLine transfer system. The available sizes are M750 and M900. Both the width and the depth can be increased by combining standard modules that are M750, M900 and M1350 in width, and 900 mm in depth.

FlexFlow combinations

FlexFlow base sections with 3 roller tops and 9 tracks.

Worktables

Seven steps to assemble the FlexFlow:

A. Frame 1

- Pick up the frame support legs (equipped with an adjustable screw, a wheel or a wheel with a brake). 4 pcs per base module and 2 pcs per module extension are needed.

B. Spacer bars 2-6

- Start with one frame support leg and attach one width and one depth spacer bar to it. Attach another frame support leg to the previously assembled leg with spacer bars. Continue assembling the frame in this way.
- One base frame with four support legs has four depth spacer bars, two width spacer bars and two horizontal tubes (four width spacer bars if horizontal tubes are not used). Horizontal tubes can replace the topmost width spacer bars which frees up all the space between the uprights for items. If the items on the top roller shelf are taller than the upright height, horizontal tubes cannot be used.

C. Roller top and loading/unloading shelves 7-8

- Assemble the roller tops and attach them to the assembled frame. The heights and angles of the tops should be defined here before assembly. Normally a 3 degree angle is suitable (750 mm deep shelf > 3-4 cm, 900 mm deep shelf > 4-5 cm). Shelf angles should always be checked after assembly and the angle adjusted accordingly.

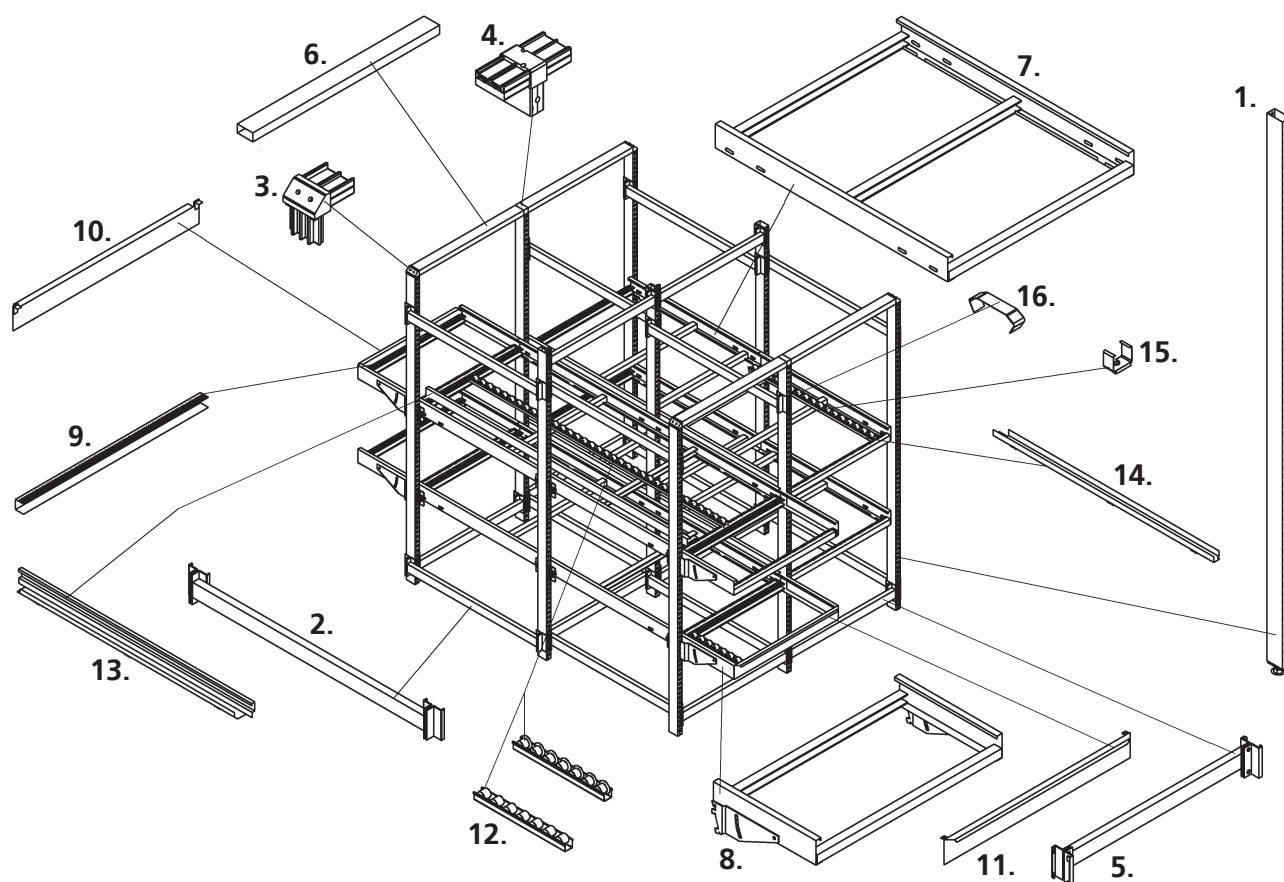

- Assemble the loading/unloading shelves (if ordered) and attach them at the correct height either on the loading or unloading end. Adjust the loading/unloading shelf to the correct angle. Please note that too large a difference in the angle (> 3 degrees) between the roller top and the loading/unloading shelf may prevent the item from rolling over e.g. onto the unloading shelf.

D. Assembly rail pair 9

- The assembly rail pair is used for fixing the roller profiles. You need one assembly rail pair per roller top or per loading/unloading shelf.
- Attach the assembly rails to the ends of the roller shelves and/or the loading/unloading shelf. The rail with longer clips should be on the loading end or the higher end.
- Do not fix the assembly rail with screws if you have a stopper/cover rail at the same end.

E. Stopper/cover rails 10-11

- The stopper rail is used at the unloading end. It closes the open profile ends, strengthens the roller top and stops the item. The stopper rail is attached either to the lower end of the roller top or to the end of the unloading shelf (if ordered).
- The cover rail is used at the loading end. It closes the open profile ends and strengthens the roller top. It has a cut for feeding the items onto the rollers.

F. Roller profiles 12-13

- First stick the roller profile towards the rear assembly rail at the higher end and under the longer clips, and then pull it back and fit it under the clips of the front assembly rail.
- The side profiles of the roller top guide the item and therefore flanged roller profiles are not needed on the sides. In the middle of the roller top, you should use either flanged roller profiles to divide the two tracks, or a divider rail pair if solid guidance is needed (e.g. for cardboard boxes or other flexible products). Flexible or heavy items (> 3kg/roll) may need additional roller profiles in the middle of the track.

G. Other parts for assembly 14-16

- The spring holder is used to fix the roller profile to the lateral supporting profile of the roller top. This is designed especially for 1800 mm long roller profiles with > 1 kg load/box.

- The spring latch is used to prevent the roller profile from opening under heavy loads. Over 2 kg per roll is considered here to be a heavy load. The spring latch is an easy solution for FlexFlows in occasional use. This product is a safety device and is highly recommended!
- The U-profile is used to prevent the roller profile from opening under heavy loads. Over 2 kg per roll is considered here to be a heavy load. The U-profile is the solution recommended for FlexFlows in frequent use. This product is a safety device and is highly recommended!
- Brake for roller profiles
 - Stopper rails are not designed to stop heavy items travelling at full speed.
 - The speed of the item can be adjusted using the roller top angle. The brakes are used in FlexFlow to control the acceleration of the item. This is essential for smooth functioning.
 - Brakes are needed on most FlexFlows. They are highly recommended!

All module sized accessories can be used also with FlexFlow, e.g. Light/balancer rails and shelves

Accessories

See pages 33-43

Accessories provide increased functionality

Optimising workstation functionality may prove difficult without well-chosen accessories that increase usability. When a workstation is well-planned and well-equipped, workflow becomes

easier and more efficient, improving ergonomics and making it easier to keep tools in place. You will find out more about our range of accessories and supplies on the following pages.

Modular means adaptable

Our world keeps changing at an ever-increasing pace. Until recently, products could be manufactured the same way for decades, but now we must prepare to make changes to our work practices at a much faster rate. In order to revise the production process to meet new requirements, an extremely flexible and adaptable workstation system is essential. Our system is designed particularly with this in mind. The same basic units, equipped with accessories that meet your needs, offer a wide range of applications.

The module size is used to identify the right accessories

In line with the modular approach of Sovella industrial furnishings, a large number of products are organised in three module sizes: M500, M750 and M900. The module size refers to the distance in mm between two upright tubes from the middle of the tube. This means that some of our accessories are organised by their modular size.

Customised for your application and your operator

The purpose of a workstation determines its basic requirements and accessories. The needs and requirements may change considerably from one employee to another, but we understand that no two people are alike. When a workstation is equipped for and adjusted to an individual's needs, each phase of the production process can be completed without delay, with accuracy and with maximum comfort.

Upright tubes and upright tube modules

Upright tubes are the basic element for accessorising Sovella industrial furnishings. Accessories are attached to Concept, Basic and Workshop tables with the aid of upright tubes

or a pre-assembled, upright tube module. The tubes or the module are attached to the back of the table. The module is extended with an upright tube, a horizontal tube and a straight bracket.

Upright tubes

name	size mm	length (l) mm	order No
Upright tube	30 x 60	500	860 991-35

4 x M500	906 35 001	906 35 002						x	

h = module's height measured from the table top surface

Upright tube with aluminium bracket attached to the table

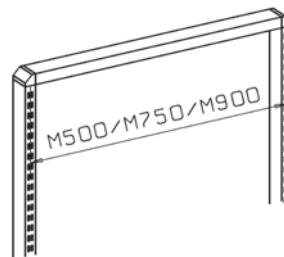

A separate aluminium bracket (846 554-00) can be used to attach a single tube to the table.

Modular size

The modular (M) size refers to the distance between two upright tubes from the middle of the tube.

The modular size is used to find the appropriate accessories.

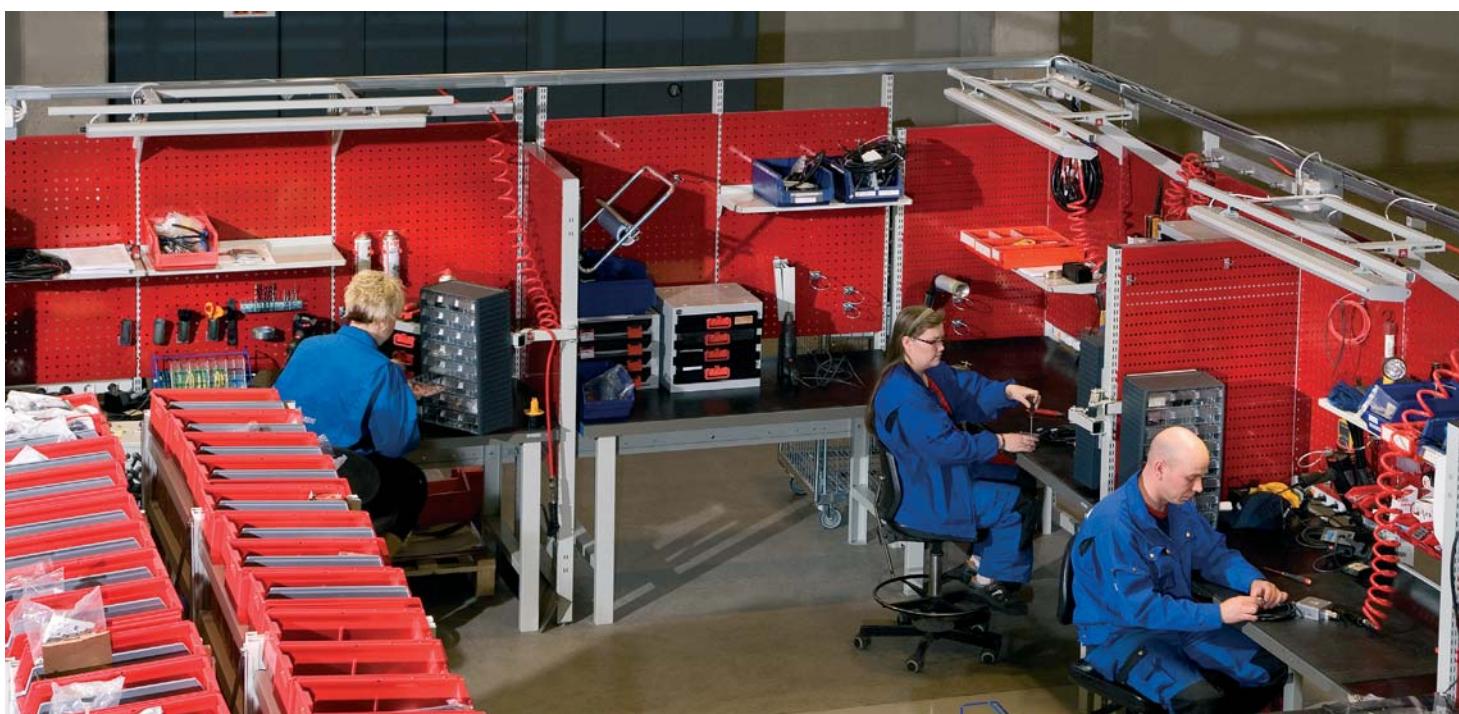

Lighting ergonomics

When designing workstations and their lighting, we observe the recommendations of the EN 12464-1 standard on indoor workplace lighting. These recommendations apply mainly to the actual workstation and its immediate surroundings. The conditions set by the standard must be met in every location where the workstation could be placed. This becomes possible only with adequate, ambient lighting or quality workstation lighting, the latter often being the more cost-efficient solution.

When designing the workstation lighting, the requirements of the work are determined first. A task that demands a good eye for detail usually calls for a spotlight. If the viewed object is square, at least two lights are necessary, in order to remove shadows. If the viewed object is a level surface, it can be illuminated with one long fluorescent lamp – though it is important to remember to direct any reflections away from the employee.

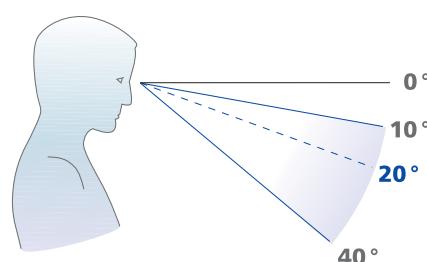

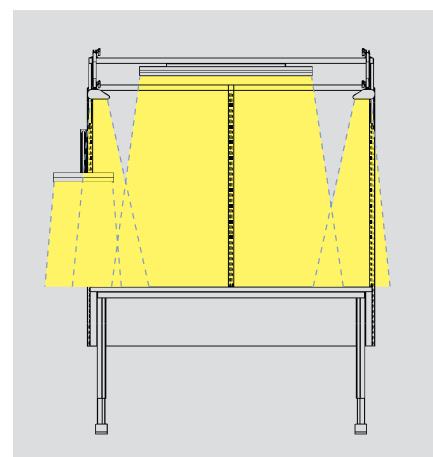

Good lighting is part of the company's image; a fact which is now more widely acknowledged.

Optical ergonomics requires optimised conditions

Optical ergonomics relates to optimal viewing conditions; where the work performed does not unduly stress the eyes, even when working constantly over long periods of time. This requires the viewed object, such as a piece of equipment being assembled, to be at a suitable distance and direction, in order to keep eye movements at an acceptable level and ensure that the details can be seen without problems.

Another important requirement is adequate and glare-free lighting. In particular, poor viewing conditions affect presbyopic people (on average above 45 years of age) whose closest possible viewing-point is at a distance of around 50 cm. If the employee uses reading glasses at work, the position of the viewed object and the lighting require some additional attention.

When optical ergonomics have been integrated in the environment and the working position is well adjusted, you can expect to save time and money due to fewer absences and decreased stress.

Sovella lighting solutions

Sovella industrial furnishings include ergonomic lighting solutions for every environment. Sovella lighting solutions are environmentally friendly: their energy consumption is low and all materials are recyclable. The lights are equipped with a prism diffuser shield which illuminates the work surface evenly and protects the fluorescent tube and technical components from dust.

Sovella® HiLite 54 is a powerful workspace light for the precise illumination of tasks that require high accuracy, such as electronics assembly, fine mechanical assembly, laboratories and testing.

Sovella® ProLite 28 is a standard light for workplaces where good general lighting is required but high accuracy is not necessary, for example packing stations.

Sovella® SatelLite 36 is a side light designed to illuminate areas not reached by general lighting.

Sovella® Task Light is an adjustable spotlight for tasks that require high accuracy, for example electronics repair and fine detailed mechanical work.

Apart from task light all lights are fitted to Sovella light/balancer rails and to TowerLine shelf which are both height and depth adjustable. Task light is designed to attach to the upright tubes.

Lighting and balancer rails

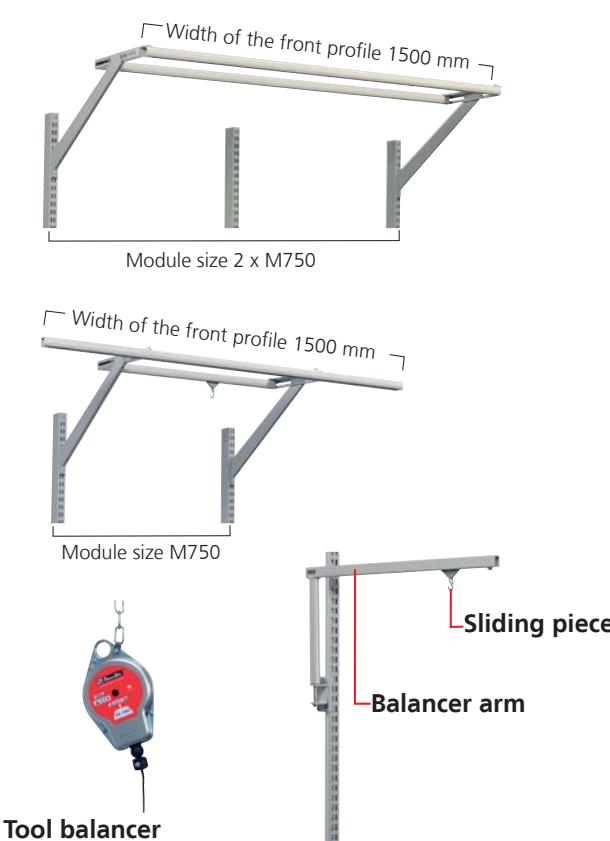

Apart from spotlight all luminaires are fitted to light/balancer rails and to Towerline shelf which are both height and depth adjustable.

Tool balancer rails and sliding pieces facilitate the use of heavy equipment. A tool balancer is fixed either to the light/balancer rail, or on a balancer arm fitted directly to the upright tube.

Energy rails, pneumatic rails, cable ducts and troughs

Energy rails are available in three module sizes: M500, M750 and M900. Cable ducts hide the untidy cables from other equipment. This makes it easy to keep the back of the workstation

and its surroundings tidy. Horizontal troughs effectively conceal the cables, without preventing maintenance access.

Energy rail

width mm	fixing		order No

Sovella accessories provide ergonomics for improved productivity

Ergonomics is a wide concept

When a working environment is being set-up, the individual using it must come first. Employees cannot be fitted within a function or system that is only based on technical considerations. Therefore, the concept of ergonomics has to be broadened to encompass all human psychophysical activities. The main objectives of ergonomic design are ensuring employees' health, increasing work satisfaction and improving individual productivity.

A modular product family, a comprehensive selection of adjustable components and a wide range of accessories are our way of implementing ergonomics in the workplace. Our ultimate goal is to ensure a relaxed working position where the work movements can follow the individual's natural way of moving.

Don't reach for it!

First, the worksurface and shelves are adjusted to the correct height and the required accessories are installed. Then, tools and equipment are placed on adjustable shelf components and adjustable double articulating arm components. When everything is within the user's reach, valuable time is saved and the worksurface is kept clean and organized.

Rotating tool panel

The rotating tool panel can be equipped with perforated panels and tool troughs. The rotating tool panel is compatible with all M500 accessories, such as the tool trough and the suspension rails.

Rotating tool panel with M500 perforated panel, M500 suspension rails and 8 plastic ESD containers 9080

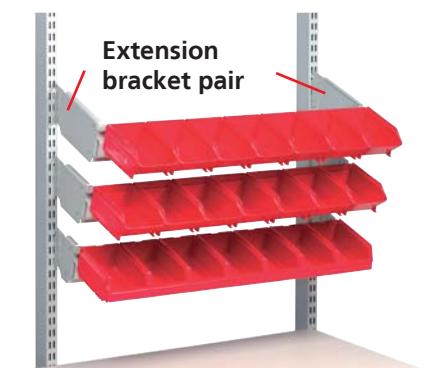

Plastic boxes, hooks and tools in pictures are not included.

Suspension rails

Another way of ensuring an ergonomic working position and saving space is to use suspension rails. The higher the stacks are, the further they are from the workstation. To ensure an ergonomic working

position, use deeper brackets on the top. The suspension rails are available in six standard module sizes.

Accessories attached to the table top

Installing racks and rails on a table is sometimes the only solution. Our range also includes accessories with table top fixing.

The various accessories are shown with the arm version on page 38.

Armrest

The armrest ensures repetitive movements are executed ergonomically. The armrest can be adjusted for left- or right-handed users and is also height-adjustable. The ESD model includes a ground-connection cord.

Chairs

Sovella chairs

Selecting a chair is a choice of ergonomics

The chair is a very important part of the ergonomics of a workstation. Even if the workstation is designed according to all rules of ergonomics, a bad chair can destroy the final result. An ergonomic chair and a well-designed workstation make working productive and comfortable.

Ergonomic task chairs

Ergonomic task chair ESD, black
Ergonomic task chair, red

862 001-00
862 002-00

The ergonomic requirements we have set for our chairs can be summed up in three sentences: The chair must match the user. It must provide support in various working positions. It must be easy to adjust. In practice, this leads to a variety of adjustment possibilities. The height and rake adjustments of the back rest give support to the lower back area. The height adjustment of ergonomic task chairs is stepless 400-520 mm. Different working positions are easy to select by tilting the seat. The ergonomic task chair is available in black ESD and red version. The abrasion resistance of the fabric is over 80 000 Martindales.

The polyurethane chair is available also in ESD version.

Polyurethane chairs and stools

Polyurethane chair, black	862 003-00
Polyurethane chair ESD, black	862 004-00
Polyurethane stool, black	862 005-00

Chairs used in certain environments must be durable and easy to clean. In these applications, a polyurethane chair is a good choice.

The height of polyurethane chairs is adjustable steplessly and the back rest has also a height and rake adjustment possibility. In addition to polyurethane chairs, our product range covers polyurethane stools. A stool is good for work done both sitting and standing. The height of the stool and foot ring can be adjusted steplessly.

Standing work is also possible

Saddle chair ESD, dark blue 862 010-00

Our saddle chair offers change in working position. A saddle chair restricts strain on the pelvis and loads the back more evenly. The unique design of the saddle chair allows the user more freedom of movement. The saddle chair is a suitable solution to many specific tasks and should be evaluated as a task specific solution.

Accessories for chairs

Arm rests and higher gas springs must always be ordered separately. Arm rests are particularly important at office work and fit both to task chairs and polyurethane chairs. The arm rests can be adjusted every 10 mm.

Drawer units

Versatile drawer units

Always where you need them

Since work is not always performed in the same place, we provide a comprehensive range of different drawer units for a variety of purposes.

You can fix any drawer units from the same series under a worktop or on a base unit, or equip them with wheels to take along to your next workstation.

Efficient storage and control

Our drawer units are great for storing tools and supplies. It can be surprising how much time is spent finding tools and other items if they are not stored systematically. The versatile interior combinations of our drawer units guarantee that your supplies are always at hand and in good order.

A comprehensive range of drawer units

We promise that you will find a drawer unit that meets your requirements in our comprehensive range. Our drawer units can be roughly divided into two categories: they are designed either for light or heavy loads.

You can choose from several different heights and drawer and interior combinations. We have selected some combinations for this brochure. Please ask about other available options: sales@sovella.com.

Drawer units for light loads

These drawer units are designed for storing lightweight items, for example in a testing laboratory or in an office environment.

Drawer unit 26

Drawer unit 35

Drawer unit 38

Drawer unit 45

Drawer unit 75

Drawer units for heavy loads

These robust drawer units are ideal for storing heavyweight supplies and tools, for example in a repair workshop or in the engineering industry.

Drawer unit 55

Drawer unit 71

Drawer unit 70

Drawer unit 90

Drawer unit 130

How to read the codes of drawer units

- The number included in the general name of the drawer unit refers to the base unit width in centimetres.
- The second number refers to the base unit height.
- The third number refers to the combination.

Example: **Drawer unit 45/56-1**

The drawer unit is 45 cm wide, 56 cm high and its combination number is 1.

Drawer units

Drawer units 26 and 35

These drawer units are fastened under a worktable to provide storage space and include either one or two drawers. The drawer cabinet comes with one drawer and a shelf with door. The cabinet can be equipped with wheels. The doors and drawers can be locked to protect the contents. More information about locks can be found on page 7.

Drawer units 26 and 35

name	size W x D x H mm	max load kg	order No
Drawer unit 26/15	265 x 450 x 148	10	860 395-35

Drawer units with wheels are also available as non ESD-versions (code 41 instead of 35).

A fully extendable drawer is perfect for laboratory use, for example.

Drawer 300 includes a folder support which makes organising hanging files easy.

The maximum load capacity of 100% extendable drawers is 60 kg!

In the picture, the drawer unit 75/66 double door with a 100 mm drawer.

Drawer unit 75

Choose from two frame heights: 56 or 66 cm, with base for a stand alone solution or with wheels for

a trolley version. All the drawer units have central locking.

Trolley model: load capacity 150 kg, 4 swivel wheels (ø 100 mm), 2 with brakes.
The trolley version comes with a rubber mat that stops items from sliding on the surface.

Cabinets include a bottom shelf and one adjustable shelf. Shelf load capacity 50 kg.

Choose the drawer unit according to your needs; with wheels, base or no base.

Drawer units

Drawer unit 55

With these drawer units you can optimise your storage and keep all your items perfectly organised. The handy locking system allows only one drawer to be opened at a time. We recommend locking the drawers during transport. You can choose the best option from three heights to meet your needs, or add height or width with different drawer unit combinations.

The units also serve as worktable legs and the shallower drawers are easily fastened under a

worktable. The 66-cm-high drawer unit includes optional wheels, making it an excellent choice for a mobile workstation. The unit with wheels comes with a rubber mat that stops items from sliding on the surface. The version with doors is ideal for storing larger items. The 50 mm high drawer is fully extendable with a load capacity of 40 kg. The other drawers are 85% extendable with a load capacity of 80 kg.

Choose the drawer unit according to your needs; with wheels, base or no base.

Always remember to lock the drawer unit during transport!

Drawer unit 71

Less than 50 cm deep, this drawer unit is ideal for use in narrow spaces, such as in vehicles. The units come with a rubber mat that stops items from sliding on the surface. The drawers have ball bearings and safety locking so that only one drawer opens at a time.

This same drawer unit is used in the service trolley with wheels p. 73. The drawers are 90% extendable and their load capacity is 50 kg.

Drawer units

Drawer unit 70, 90 and 130

You can fit an amazing number of things in these spacious drawer units. Choose the one that best meets your needs from two heights: 110 and 140 cm. The 110-cm-high drawer units include a cover that doubles as a worktop with a rubber mat. This is the ideal height for working standing up.

The handy locking system allows only one drawer to be opened at a time. The drawer unit can be moved with a pallet truck or a forklift when the base front plate has been removed. The drawers are 85% extendable and their load capacity is 80 kg.

Drawing holder

name	W x H mm	order No
Drawing holder 70	706 x 500	834 939-35
Drawing holder 90	904 x 500	854 260-35
Drawing holder 130	1302 x 500	854 261-35

The optional drawing holder keeps your documents protected and easily available. The drawing table has a magnetic document fastening with 3 magnets included.

Drawer unit 70

The drawer units 70, 90 and 130 can be moved with a pallet truck or a forklift when the base front plate has been removed.

Drawer units

Sliding door cabinet

Sliding doors are practical when there is little space in front of the drawer unit. When open, sliding doors make all of the contents visible. The sliding door cabinet is built to the same height as the drawer unit 70/110 to enable effective combinations. It is equipped with a transport base like the drawer unit 70 and the cover doubles as a worktop with a rubber mat. Drawers and E-shelves open 85 % and their loading capacity is 80 kg.

Combinations with fully opening drawers and extendable shelves

In the drawer unit 70 and sliding door cabinet, the fully opening drawers and extendable shelves allow for the most efficient use of space. Each fully opening drawer and extendable shelf has a load capacity of up to

150 kg. They can also be integrated into heavy storage systems. Choose from ready-made combinations or contact your Sovella sales representative for a tailor-made combination.

Trolleys

Freedom of mobility with trolleys

Sovella industrial trolleys cover both light and heavy industrial applications. Each trolley can be customised to suit the customer's requirements.

The wheels are equipped with brakes to ensure your safety on uneven surfaces.

Increased productivity with mobility

Work is not always confined to a single workstation and tools must be moved around accordingly. Lightweight trolleys are ideal for this situation, significantly increasing productivity up to 30%.

Each task is different and requires dedicated tools. Due to their modularity and versatile accessory components, trolleys are easy to design and adapt to suit a multitude of users and applications.

Trolleys

Light-duty trolleys provide solutions for storage as a buffer stock or additional ergonomic workspace.

Worktop trolley

Storage trolley

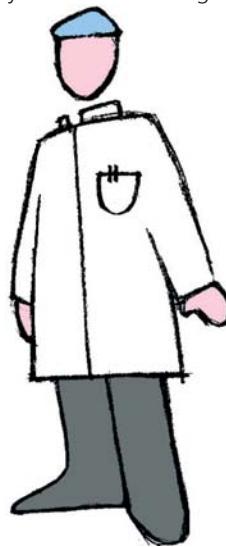

Ergo trolley

Multi trolley

Basic trolley 3

Trolleys for heavy industry can support extremely heavy loads and yet can be easily transported. They are often used as repair stations with heavy tools.

Service trolley

Trolleys

Light-duty trolleys for additional ergonomic workspace and storage

All the light-duty trolleys are equipped with four swivel wheels (Ø 100 mm), two of which have brakes. ESD versions are also available.

Worktop trolley

A great solution when you need a mobile workspace. The height can be adjusted from 655 to 1055 mm.

Storage trolley

An easy solution for mobile storage, the storage trolley has an adjustable middle shelf, and the shelves are fitted with standard rubber mats.

Ergo trolley

The ergo trolley provides extra workspace. The height is continuously adjustable from 650 to 900 mm in the same way as the Concept work table. Lower shelf as an option.

Multi trolleys

Multi trolleys provide an ergonomic mobile workstation. Multi trolleys are available in three different widths: M500, M750 and M900. This means that all our module-sized accessories can be

used with the trolleys. Multi trolleys are equipped with four swivel wheels (Ø 100 mm), two of which have brakes. ESD versions are also available.

Fitter's trolleys

A fitter's trolley with drawers lets you take your tools wherever you go, while keeping them organised. The rubber mat helps keep tools in place while you are working and the drawer unit comes equipped with a safety lock that allows only one drawer to be opened at a time. This helps to keep

the trolley in balance – even with heavy loads. The fitter's trolleys are equipped with four swivel wheels (ø 100 mm), two of which have brakes. Fitter's trolley can be combined with all M750 accessories.

Fitter's trolley 1

Fitter's trolley 2

Fitter's trolley 3

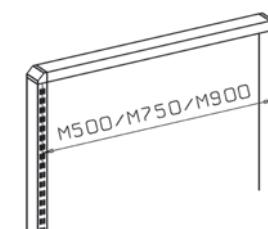

Fitter's trolley 3 includes 6 cone racks. Tool brackets, page 42, ordered separately.

Fitter's trolley 4

Modular size

The modular (M) size refers to the distance between two upright tubes from the middle of the tube. The modular size is used to find the appropriate accessories.

Industrial shelving and cabinets

There is a place for each item

Shelves and cabinets are needed to keep the workplace in good order. We have a large range of products, and the product families are presented in more detail on these pages. In selection of furniture

elements, the space dimensions and the load capacity needed should be considered. Shelves are also excellent as space dividers. ESD protection is also available.

Extended tool life

The service life and condition of tools can be significantly improved through their appropriate storage. They are stored in their own places, protected from dust and dirt, in a locked cabinet.

A versatile storage solution is created by using suitable accessories

An open shelf is not always the best way to store things. Tools, expensive equipment, and small items need another type of solution. Through using lockable drawers or adding doors and walls, an open shelving system is turned into a versatile storage solution. Drawers can be fitted with a variety of interior combinations, to suit the tools stored in them.

The Sovella Storage System is modifiable

A storage system is built around the basic component, and extension parts, doors, screens, and other accessories can be added to create an efficient overall solution. In addition the shelf heights can easily be adjusted as needed. Even the load capacity can be increased by adding additional supports.

Industrial shelving and cabinets

The Sovella Heavy Storage System is designed for heavy items

When the items are heavy, shelves need to be very strong as well. Computer servers or large measurement instruments can be surprisingly heavy. A heavy storage system is designed for load capacities of up to 400 kg/shelf.

Sovella Industrial Cabinets allow for a tidy, efficient working environment

No unnecessary time should be used for looking for tools and materials. This interrupts work and causes stress. In a well-equipped cabinet, everything is where it should be. A ready-assembled cabinet is easy to move to the most convenient location. There are adjustable glides under the cabinet. This makes it easy to adjust the cabinet so that it stands straight on uneven surfaces. All module-750 and -500 accessories, such as shelves, drawer units, perforated panels, and extendable shelves, can be used in selecting accessories for the cabinet.

Storage System

The Sovella storage system can be built as a combination of cabinets and shelves and you can use it as a space divider.

The storage system is available in two standard heights: 200 cm and 240 cm and two widths: 80 cm and 100 cm.

All standard and extension parts include 6 shelves.

Heavy Storage System

The heavy storage system is suitable for large and heavy items. The shelf load capacity is 400 kg and the shelf depth is 70 cm. It can be built as a

combination of cabinets, drawers and shelves. The storage system comes in one standard height of 200 cm and two widths: 75 cm and 95 cm.

All standard and extension parts include 6 shelves

Standard parts

name	size W x D x H mm	order No
Standard part, open	750 x 714 x 2000	C 375 35 001

Industrial shelving and cabinets

Industrial cabinets

A versatile storage solution can be created using the appropriate accessories. An open shelf is not always the best storage method. Tools, expensive

equipment and small items need a different type of solution. Sovella Industrial Cabinets include a wide range of accessories for tool storage.

Includes 2 pcs steel shelves 80 , 854 345-35.

Move with a pallet truck

The cabinet can be moved with a pallet truck or a forklift when the plinth front panel has been removed. Cabinets are equipped with adjustment screws.

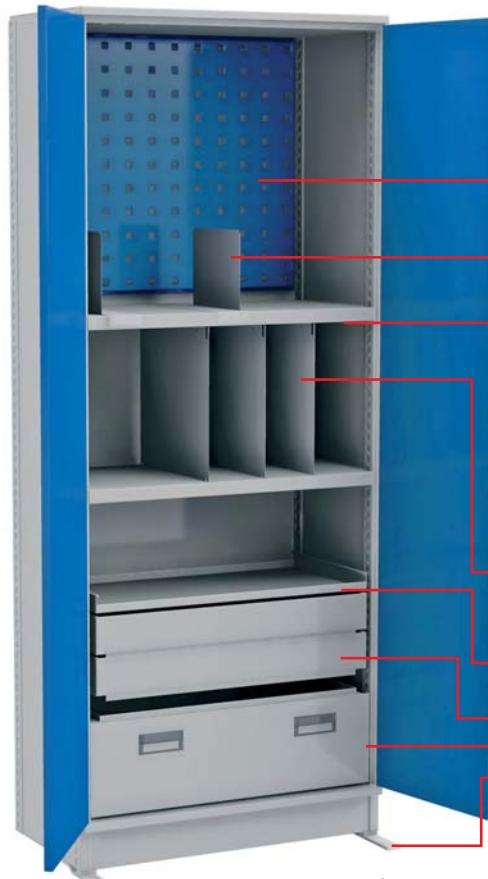

An extendable shelf for the cabinet

When the cabinet is used for storing folders, a separate extending shelf is a good idea. This shelf makes it easy to browse through the folders.

Industrial cabinet accessories

All the M750 accessories fit the cabinet 80 and can be easily installed inside.

Perforated panels

Perforated panels are a part of a good organisation

Perforated panels are efficient dividers of space and, at the same time, practical storage facilities for tools and equipment. An industrial screen can be

used as a sound-insulating space divider through equipping it with perforated back panel elements with fireproof insulation.

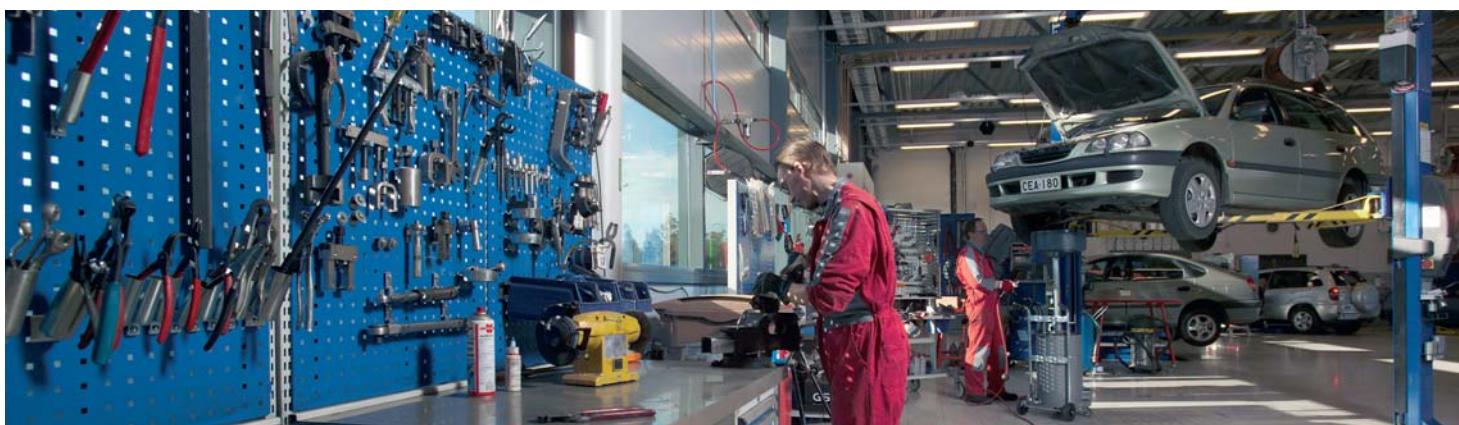

Order and tidiness are appreciated

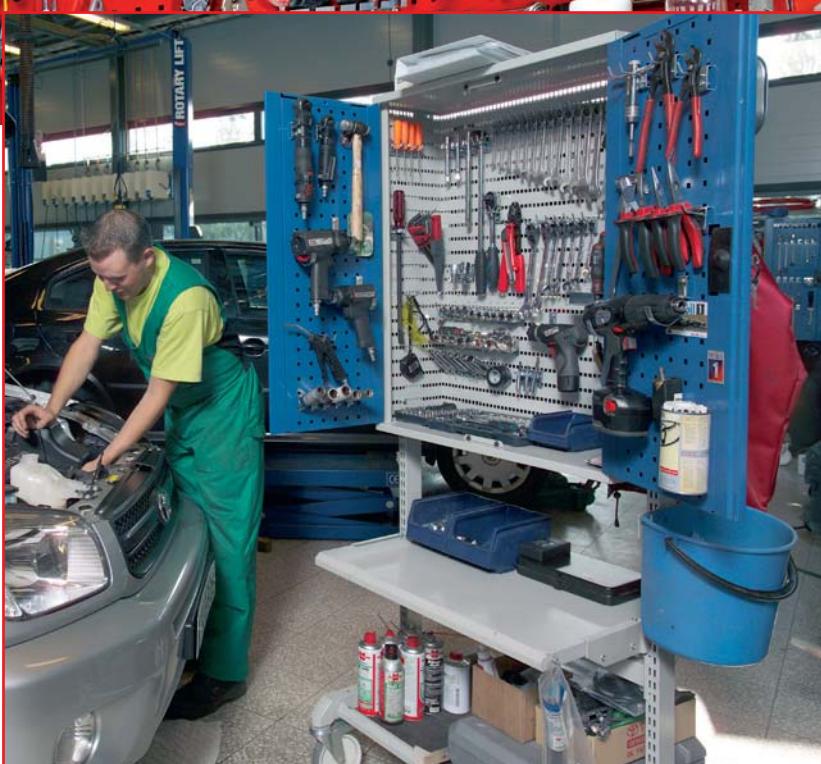

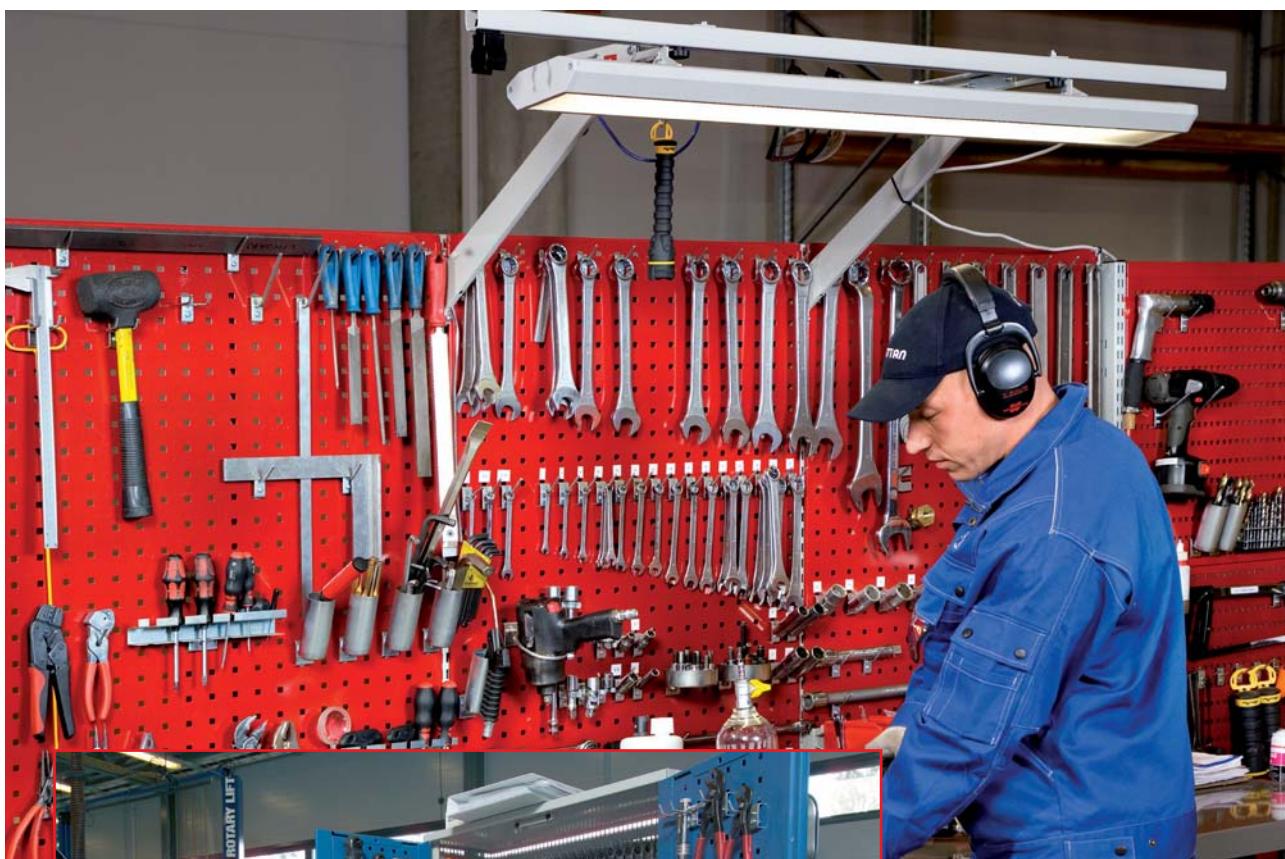

Order and tidiness cannot be achieved and maintained without there being a place for each tool. Perforated panels and the hooks offer a practical and versatile solution for storing tools and equipment. Perforated panel products are available for direct fastening to the wall or for fastening to upright profiles or tubes.

Hooks also for heavy loads

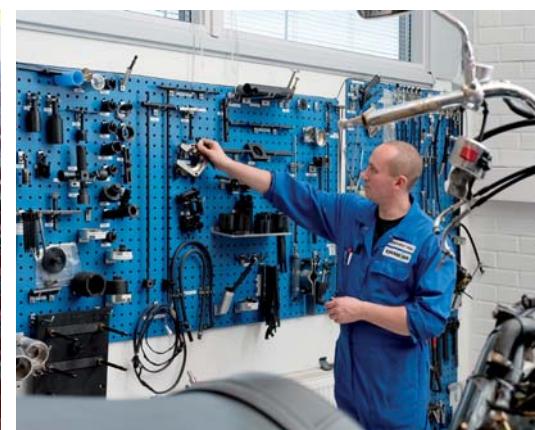

The hooks can withstand loads of up to 20 kg.

Perforated panels

Steel shelves, suspension rails, perforated back and wall panels and a perforated panel cabinet can be fastened to the upright profiles.

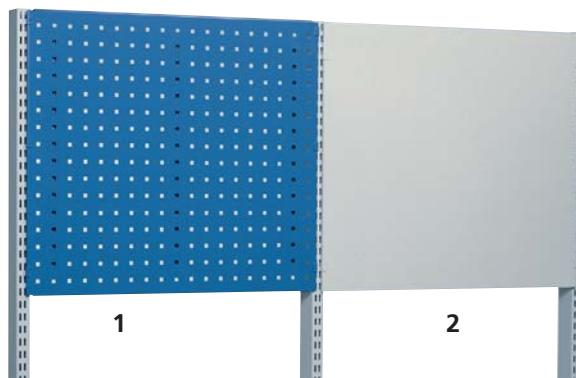

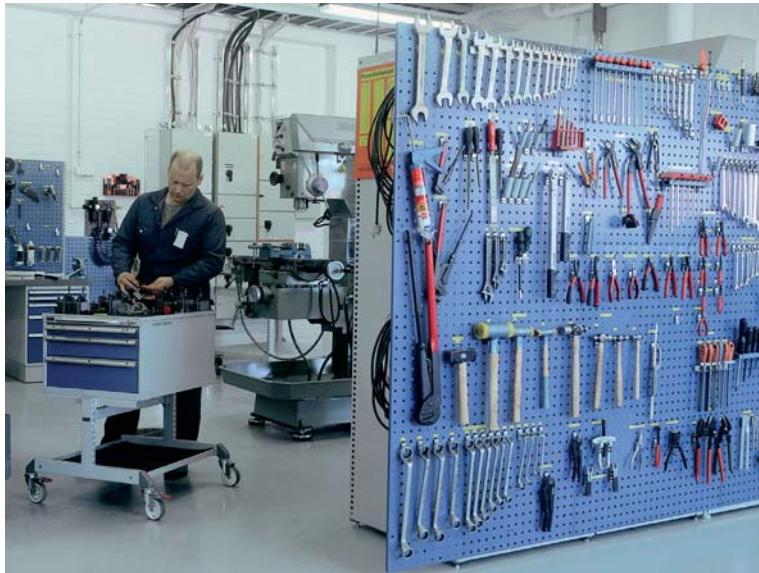

Perforated panels

Perforated back and wall panels

The perforated back panels are fastened to the upright tubes. The perforated wall panels are attached, either directly to the wall with screws or

to the upright profiles with fastening clips. The size of the perforation is 9 x 9 mm, center to center 38 mm.

Back panel	M900	888 x 400	860 191-35

Back panels are solid, colour light grey ESD 35 (ESD 7035).

The colour code is included in the order number. It is either at the end, following the hyphen (e.g. 860 804-35), or in the middle (e.g. 100/40/200 C 334 07 000).

Industrial screens

Industrial screens are modular, and they can be equipped with all M750 accessories illustrated from page 30 onward. Industrial screens can be used as

Industrial screens

name	size W x D x H mm	order No
Standard part, T-feet	780 x 60 x 1850	C 520 07 001
Extension part, T-foot	750 x 560 x 1850	C 520 07 002
Extension part, L-foot	750 x 310 x 1850	C 520 07 003
Extension part, I-foot	750 x 60 x 1850	C 520 07 004

Includes 6 perforated back panels, 3 pcs/side.

The standard part includes two feet.

The extension part includes one foot.

Part list

name	size W x D x H mm	order No

Perforated back panel M750	718 x 17 x 613	836 702-35/07
Perforated back panel M750, insulated*	718 x 17 x 613	836 700-35/07
Upper list	718 x 65	851 907-07

The wall module requires two spacer bars.

* The insulation material used is polyether foam.

All M750 accessories are suitable for the industrial screen.

The colour code is included in the order number. It is either at the end, following the hyphen (e.g. 860 804-35), or in the middle (e.g. 100/40/200 C 334 07 000).

space dividers. They also provide noise insulation; the combinations available have perforated back panels on both sides and one side is insulated.

Tool storage system

The original Sovella tool storage system requires only 2 m² of floor space and provides 16 m² of storage space. There is no need to fasten it to the floor, as it stands firmly on its own. There is a wheel on the lower edge of the panels which makes them easy to move. The load capacity is 100 kg/panel. A maximum of 10 panels can be fastened to the tool storage system.

MultiLine assembly solutions

Material flow to effective workstations

In the assembly industry, workstations are well planned and designed since they must function as well as possible. MultiLine is expressly designed as an accessory for Sovella workspace solutions.

Its underlying concept is simple: by connecting workstations to a transfer line you can achieve a more flexible and controllable material flow between workstations without sacrificing characteristics such as usability or ergonomics.

Low investment costs

The MultiLine transfer system has two characteristics, due to which its investment costs remain low. Firstly, it is integrated with an existing system, complementing current processes and thereby avoiding the need for additional investments.

Secondly, it is built using standard parts and design, which makes it easy to adapt to any situation and space. It can also be easily and quickly modified when the layout changes.

Optimised for WIP

The core of WIP logic (work in process) comprises allocating a value to stored items between production phases. Money is wasted when half-ready products or components lie unused e.g. in a trolley used as a buffer. If MultiLine is used, only a small quantity of half-finished products lies waiting between production phases.

This problem is amplified if a mistake made in one phase remains unnoticed until a trolley full of defective components is brought to the next phase. With MultiLine both the cost per mistake and the number of mistakes are significantly minimised, because only a few faulty products can be produced before the mistake is noticed.

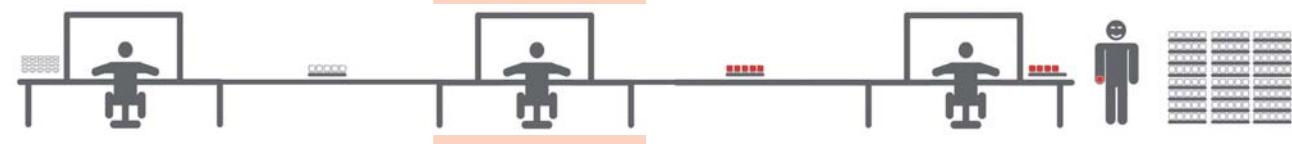

For a tailor-made study, contact our specialists in lean manufacturing and order a separate brochure at info@sovella.com.

Packing solutions

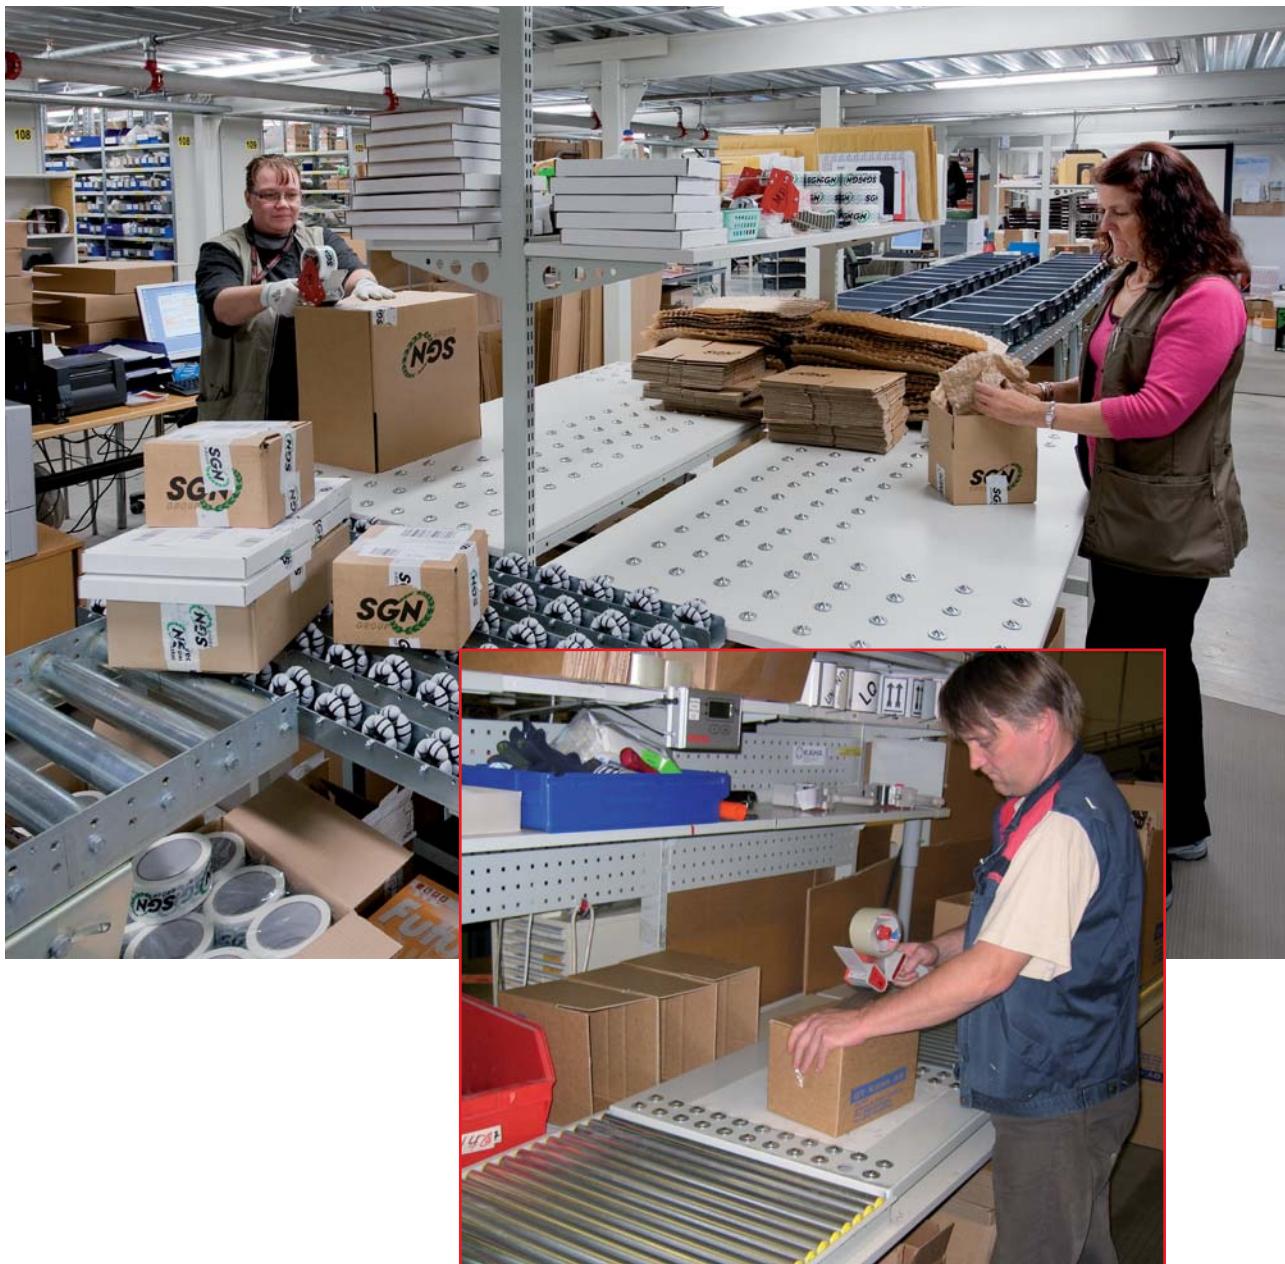

Sovella packing workstations

New requirement in dispatch areas

For many years the packaging area was comprised of a standard bench or table with storage for packaging material. This trend has changed drastically during the last few years as packing areas are taking on additional processes including; light assembly, test, re-packaging, custom labeling, shipping and quality control. Reporting, traceability, and information sharing have become part of most pack & ship processes. This demand for information creates new technology demands, as well as a organized, productive packaging environment.

Sovella's packaging benches are designed for activities where productivity, efficiency, effective working conditions are of utmost importance. In shipping or packaging areas these include sorting, bagging, collating, labeling, carton packing, weighing, re-packing, order picking, relabeling, coding, spot gluing, kitting and assemble or package to order activities.

Sovella packing solutions are used in industries such as electronics, health care, pharmaceutical fine mechanics, luxury, aviation, nanotech, military and clean room based technology as well as third party logistics centers.

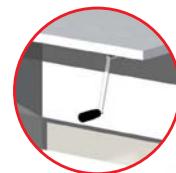

Packing bench

Order No C100 41 110

Concept packaging workstation 1800 x 900 mm equipped with roll storage, triple layer cutting unit, perforated tool storage plus 13 pcs. hook set and a carton storage shelf.

Pick-and-Pack Bench

Order No C101 41 110

Concept crank workstation 1800 x 900 mm, adjustable in height and equipped with a bin rail for small components storage, a CPU holder, monitor/keyboard holder, carton storage and a mobile drawer unit.

Repack and label

workstation
Order No C103 41 110

Motorized workstation 1800 x 900 mm with maximum storage for folded carton boxes. Tools can be easily stored in the drawer unit. Workstation comes with perforated tool plate, metal shelf M900x400, terminal and monitor/keyboard holder.

Pack-to-order bench

Order No C120 41 110

Basic workstation frame 1800 x 900 mm with carton shelves, printer platform, monitor and CPU holder. Scale table is optional.

Packing frame

Order No C123 41 104

Frame workstation 1800 x 600 mm, a simple solution for packing work. Workstation comes with perforated panel, hook set, document holder and M1350 shelf with 2 pairs of metal dividers for envelopes.

Carton boxes, monitor, etc are for display purposes only and are not included in our offering.

The items shown in this brochure are a small selection of Sovella's wide range of workspace solutions. Contact your local Sovella representative for more information and solutions.

Sovella wall shelving

Sovella wall shelving is an easily modified, versatile shelving system. It is mounted directly on the wall. Keeping floor area clean and empty is important,

especially in public buildings. The wall-mounted Sovella shelving is particularly suitable for public buildings and laboratories.

Direct wall fastening

Fasten the upright profiles to the wall with screws, using fasteners suitable for the wall material.

Horizontal rail fastening

Fasten the oval horizontal rail at an appropriate height. Take the wall's inner structure into account. Fasten the upright tubes to the oval horizontal rail. The horizontal rail makes it easy to install and modify the system.

Oval horizontal rail

Bracket, strengthened	550	70	001 708-35

Select accessories

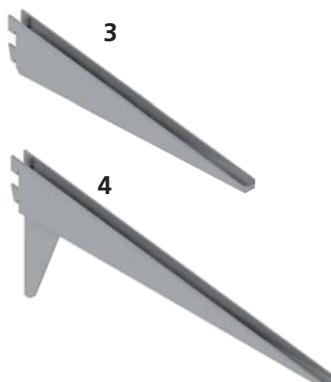

Shelves, brackets and perforated back panels are attached to the upright profiles.

Colours

Sovella wall shelving parts are available in white (-21) and light grey (-35). Other colours are available on request.

Oval horizontal rail

We recommend the oval horizontal rail for very heavy loads (300 kg/metre)

2

Sovella wall shelving is perfect for public buildings and also for laboratory use. The horizontal rail eases installation and modification of the shelving system.

In this example an oval horizontal rail and upright tubes have been fitted to the wall above a fixed cable duct to accommodate the accessories.
